Hot shot execs a threat to DPMs

RESET by the demands of users on new and the pressure of computer salesmen on the other, the OP manager might often feel the most misunderstood person in the computer world.

But in the US, at least, the role of the top DP executive is at last being recognised as one of the most vital in a company (see page 14). For the existing DP manager this opens many doors, including the one to the boardroom. But for those OP managers without the ability and imagination to take advantage of this increased status, it could mean the end of the path to corporate glory.

The writing on the installation wall is backed up by an example quoted in the Wall Street Journal of a multi-billion dollar insurance company which brought in a new man to oversee its computer. "He was placed for his reputation as a hot shot executive first and a computer whizz second. In the belief that his prowess as a businessman would give the data processing department greater respect with the managers, thus increasing its effectiveness."

There, in a nutshell, is the challenge and the threat.

DP managers who fail to

recognise that we are on the verge of an information processing revolution will be swept away in the tide of "hot shot executives." For the data processing department as it is currently known will soon become part of the corporate information system, encompassing computers, the automated office, telecommunications, electronic mail — all the constituents of information technology.

The shortsighted DP manager who can see no further than this month's budget and yesterday's technology will be able to continue blissfully in ignorance for a little while yet.

Meantime, armed with micro Molotov cocktails, the user revolution will begin in areas remote from the DP centre and gradually encircle and overpower the lumbering department.

On the other hand, the visionary DP manager will perceive the future and will start preparing for it. The way ahead for DPM crusaders was summarised in the Journal by a quote from Joan Knitson, president of Associates for Human Resource Development, a New York computer consultancy.

She said: "We're seeing the beginnings of empire building, where the data processing executive tries to acquire as many other parts of the company as possible, taking over business forms design, the mail room, word processing and, in some cases, all administrative services."

Many OPs still pooch-pooch the idea that we are on the verge of an information technology revolution, pointing to the difficulty of even getting the existing systems to work to full capacity. But, while it is true that the typical OP installation is more conservative than the rate of technological change would lead us to believe, that revolution has begun; the first shots have been fired and it is time for brave DPMs to step forward to a golden future and the rest to remain stuck in the DP mud.

Computer Weekly and the Institute of Data Processing Management are running a workshop in October which tackles in a practical way the question of how the OP manager can best communicate with users in order to improve the status and influence of the OP department.

Have a day out with the Computastars

After the Commonwealth Games come the Computastars finals. On Saturday, September 30, at the Crystal Palace sports centre in South London, athletes from all over the country will be competing for the honours in the biggest contest of its kind ever organised for computer personnel in the UK. Over 200 competitors will be taking part in a wide range of field and track events and those teams that reach the final rounds will have taken part in every sport. If you company has a team in the contest, even if it hasn't — come along and bring the family to cheer them on. Use the coupon below to book your tickets. Each ticket entitles a numbered seat under cover and provides access to refreshment and bar facilities.

Computastars has been organised by Goldsmith Recruitment International with the support of Computer Weekly.

TICKET ORDER

To: Computastars, Goldsmith Recruitment International Ltd, 15 Buckingham Palace Road, London SW1.
Please supply:

..... Adult ticket(s) at 50p each.
..... Child ticket(s) at 20p each (under 14).
for the finals of the Computastars Competition.
I enclose cheque/PO for made payable to Computastars.

INTERLUPT

A STUDENT once had a program for the university minicomputer which took several hours to run. So he decided to run it overnight.

On the first night he loaded the program and it started running as predicted, reading records off the tape as required. The student went off home, carefully switching off the machine room lights so as not waste electricity.

In the morning he found the paper reader in an "unloaded" state although it had read only a few records. The engineer could find no fault, and the student could find no bug, so the student repeated his task on the second night... and on the third... and each time he found the same problem in the morning.

On the fourth night, the student and the engineer sat up together to see what was causing the fault. By the early

hours of the morning it was clear everything was progressing much further than usual. While chatting, the engineer found out that the student had normally switched off the lights before leaving.

Suspecting an earthing fault, the engineer promptly switched off the lights. Nothing happened immediately. Then, as they sat there in the gloom, along came the cause of the trouble — a large, marily buzzing fly. Attracted by the paper tape reader light, it flew through the beam and caused the reader to become unloaded. A rolled-up newspaper quickly fixed the fault.

The moral: it is not only hardware and software that can have a fly in the ointment.

• This week's £5 winning entry was submitted by Andrew Herbert of Cambridge.

ATLANTIC

- ★ IBM Systems Leasing
- ★ IBM Computer Brokerage
- ★ Industrial Leasing
- ★ Telecommunications Leasing

The Directors of Atlantic Computer Leasing Ltd. are pleased to announce their interim results for the period 1/7/78-30/6/78:

	1978	1977
Group Turnover	£4,661,730	£6,694,535
Trading Profit	£606,550	£723,285
Investment Income	£55,920	£14,614
Gross Profit	£662,470	£738,795
Net Assets	£1,897,662	£1,289,074

containing strong demand for 370 Flexbase leasing program — availability of second-hand systems much improved — improved profit picture due in the main to greater productivity within the Sales Organisation and the availability of reasonably priced second-hand 370 systems for lease — continued growth through 1978 expected with forecast turnover of at least £10m.

MARTIN BANKS REPORTS ON AN IMPORTANT NEW ANGLO-US MANUFACTURING VENTURE

GEC and Fairchild join to make micros in UK

HAIR on the heels of the National Enterprise Board's Immos venture into the world of advanced semiconductor manufacture, Britain's GEC and America's Fairchild have confirmed that they are to form a new joint company to make microprocessors and semiconductor memories in the UK (CW, August 10).

Unlike Immos, however, the new venture will not be a totally separate entity. Speaking to Computer Weekly, Robert Clayton, technical director of GEC, emphasised that the two partners had joined together to set up a manufacturing company only. The marketing of the products it makes will be left either to Fairchild or GEC, depending on the design, and/or which was more suited to approach a particular customer or application area.

In effect therefore, the new British-based manufacturing facility, when established, will basically be a "sub-contract" volume production house for the two partners.

Clayton indicated that, should the plant be located in one of the country's special development areas, GEC would take advantage of whatever government support was available. Such ventures can gain considerable financial help from the Department of Industry under the Industry Act to cover the cost of building and equipping new factories.

As the negotiations between

the two partners had started well before the announcement of direct government support for microelectronics and microprocessors, its formation was not based on obtaining some of that money.

"Much of the £70 million is in fact for R&D work," Clayton pointed out, "and as a manufacturing operation, it would not be involved in such work."

According to Clayton, the products actually produced will be those "that are right for the market in 1981". Setting this in context, he said "if the plant was operating now, it would be making general purpose 8-bit micros, 16K RAMs, and perhaps 64K CCO serial memories, because that is what the market is taking in volume."

Given the projected timescale for establishing the facility — by early 1980 — and the doubts that GEC has over the market potential of the 64K RAM, the 16K RAM will still be a prime product for the factory to produce. Like Immos, there will be a heavy concentration on the standard N-channel MOS process but this will be complemented by Fairchild's charge coupled device (CCD) technology as a second string.

The aggressive timescale being set for the project will generally be a copy of Fairchild's existing NMOS production facility in San Jose, California. Much of the production equipment is, in fact, already on order.

The question of whether this

lead will provide the partners with a long term lead in the marketplace is, however, more difficult to answer, for its devices will necessarily be based on existing design philosophies. Immos presents greater risks, and the chance of perhaps greater rewards, by starting totally from scratch, with totally new philosophies. Only when the first Immos products arrive will it be known whether they are right for the market.

Fairchild was chosen by GEC as its partner in this venture on the basis of mutual need, according to Clayton. Fairchild required another MOS facility, preferably sited in Europe; GEC wanted to expand the scope of its operations in the microelectronics market beyond the specialised position held by GEC Semiconductors.

"We could have done it by expanding GECS itself," said Clayton, "but Fairchild offered a better bet."

Through GEC Semiconductors, GEC already has close links with another US semiconductor company, Intel. It is a major distributor for Intel products, and is capable of qualifying Intel devices for military and Post Office approvals.

The existing product lines of GEC Semiconductors, which will remain as a separate company from the new venture (CW, July 23), are heavily based in the special circuits area, but some of

voiced for work not done: involved twice for the same work; and overcharged.

Four people have been interviewed by police at Plessey and in two subcontracting firms in connection with the alleged fraud. A spokesman for the Merseyside fraud squad said that they are currently collecting statements to complete the case before presentation to the Director of Public Prosecutions. The company confirmed that there was a police investigation of events alleged to have taken place at Edge Lane site in 1977.

Now the search is on for 5,000 staff

WITH a projected requirement of about 1,000 people for the GEC-Fairchild joint venture semiconductor plant, the potential total requirement for semiconductor engineers and technologists, together with production workers, has suddenly risen in recent months to nearly 5,000 by the mid-1980's.

An estimated 4,000 of these will be created by the NEB's Immos company when it starts production in this country.

One of the most crucial problems facing both of these new ventures — and the biggest potential block to their success — will be the country's capability in providing these people within the timescale.

There is already an enormous shortage of skilled staff in the UK, and the existing companies making semiconductors here find that poaching staff from their competitors is an essential way of life.

This aspect of recent developments has been pointed out by Conservative Party industry spokesman Sir Keith Joseph, who criticised the NEB's Immos venture on these grounds. He went on to criticise the present government's attitude to taxation and the way it has driven many skilled people abroad. "If ever there was an admission of the bad climate for individuals," he said, "it is this (Immos). The bulk of the development work will be done in America rather than in this country."

Though it is hoped that many new skilled people will start coming through schools and universities to fill future jobs, it will be almost impossible for these two new ventures to avoid poaching staff from existing manufacturers.

CLAYTON... joined together in a manufacturing company only.

French join in the attack

IF negotiations currently in progress come to fruition, the UK will soon have European company in its attack on the world market for advanced semiconductor devices. A new French company, Semos, should soon come into being in a move that closely parallels Immos and GEC-Fairchild. In the French case, however, the American interest comes from Intel and Mostek. See Micro News, page 16.

PM-DSYST-1

ON VIEW NOW

The Plessey Peripheral System PM-DSYST-1 is a family of enhanced DEC S20 compatible, general purpose, time shared, disc based computer systems specially designed for business applications. It uses Plessey commercial systems-001 disc resident operating system and can run all languages applicable to RT-11.

The basic PM-DSYST-1 package includes central processor with 64 K bytes of MOS memory in an attractive chassis • a 5 or 10 Megabyte dual disc system with one fixed and one removable cartridge • a video terminal or an impact printer terminal • the PCS-001 software package.

Equipment for system expansion includes additional cartridge disc storage up to 20 Megabytes • dual floppy disc units with 512 K bytes • 46 cps Daisy Wheel printer or a 300 LPM printer • various additional video terminals or hard copy terminals.

See it working for you. To allow you first hand experience of this remarkable development, Plessey have arranged a series of "hands-on" demonstrations around the country.

Come along to the hotel which suits you and ask your questions, discuss your applications with the technical people, and see for yourself the simplicity of this advanced computer and its capacity for work.

If you know in advance that you will be coming try to let us know. Telephone Mrs George or Mrs Wilson. Otherwise just come along, we shall be very pleased to see you.

DOWNTIME

by Chad

Swansea keeps its cool

A MAJOR disaster has been averted in South Wales, you will be pleased to hear. I read in the Daily Mail, which was reporting on the strike at the Swansea licensing centre, that "Maintenance men have switched off the computer's air conditioning, without which it could overheat and blow up."

I was most relieved to read that the computer had been switched off, allowing the good people of Swansea to breathe easily again.

I had had visions of a most horrendous explosion, shattering the town with sprockets, skip chains, push-down stacks, and so forth.

Bit of a letdown...

THE question I am most often asked by lay people awestruck by the jargon of our mystical profession, is "What is software?" Doubtless you have had the same experience. Well, you can now direct them to that most authoritative of sources, the Times, in which there was a

story recently under the headline: "Military software helps RFD to record."

The story is a bit puzzling to read, as one sees no mention of computers, but eventually it becomes clear what software is: parachutes and rubber dinghies.

So now you know.

Increased word power

I WAS interested to note that in the Fabian pamphlet on The Computer and Society, so scathingly reviewed by my colleague Kory Johnston (CW, August 3), sinister implications are read into the arrangement between the AA and Readers Digest, which puts all AA members on the Readers Digest mailing list.

Junk mail from Readers Digest is unquestionably a nuisance, but I really could not see anything harmful in the magazine discovering the benefits of computer technology.

Not, that is, until another

colleague pointed out that all the so-called off-beat items written about the computer industry inevitably land on my desk for processing.

Could I really, he asked, face with equanimity the prospect of having to read, every month, the latest of an unending stream of features entitled, "The most unforgettable computer I have ever known?"

I am heartbroken to have missed a guest editorial in the New York Times that was mentioned in the paper's annual report. Admiral Eino Zumwalt was writing about "The importance of Mickey Mouse".

be prepared

our supervisor (Ms Valli Dater by name) was quite a card until she found the key to discovery one tea break while resting in the margins cool of the typing pool

"My future," said she (Ms Valli Dater, the same) "lies with Mark" (O.C.R. Jnr by nickname) for he, with his ECMA font B suave executive style, le whole-all Valli tomorrow begin

being quite a character in his own (read) right, dear old Mark lost no mill time in popping the question (/WU L MRYME?)

Although our own angle punched card days are numbered (1 to 807) and her vision of an OCR future was a wise decision, we will miss Ms Valli—the finest 80 col doll ever to graduate from our exclusive data Prep School

malcolm poltu

In a long-awaited petition to the Federal Communications Commission, American Telephone and Telegraph formally asked the

government to approve in principle its establishment of an intelligent digital network called Advanced Communications Service. Here

HESH WIENER describes some of the benefits to users and the possible impact of such systems on the communications industry.

Impact of AT&T system on the telecoms industry

THE full implications of such services as AT&T's proposed Advanced Communications Service (CW, July 27) have, perhaps, not been adequately appreciated by the potential users, the PTT authorities, or by equipment manufacturers. According to AT&T, the service, which would be offered on a nationwide basis, would allow terminals and computers to be connected with unprecedented ease.

Should the FCC approve the advent of ACS, a tariff schedule would be developed by AT&T by the middle of 1979. The network could go on the air shortly after the tariff is approved, using some existing Bell System components to serve initial customers.

The service would benefit a wide variety of users, and enable smaller organisations to develop communications-based applications that at present are not economically feasible because the initial costs are very high.

On the other hand, companies selling equipment which provides users with functions that will be available through ACS may suffer. IBM in particular, may have to rethink its approach to communications because the bit-orientated transmission scheme proposed by AT&T follows X25 guidelines rather than IBM's SDLC protocol.

"The ACS announcement must be very disturbing news for IBM," declared Charles Licht, president of Advanced Computer Techniques Corp. "In the final analysis, IBM would have to view ACS as a Federally-sponsored alternative to the purchase of IBM equipment."

Indeed, sources close to IBM management said that there were long faces in Armonk when the news of ACS broke. IBM, which has invested heavily in the promotion of its own communications techniques and is deeply committed to Satellite

Business Systems, may be impacted in unforeseeable ways by the ACS announcement. User organisations may pause and reflect on the AT&T offering before they expand existing communications applications. This could slow orders for terminals, communications processors and related gear, regardless of the ultimate FCC decision on the AT&T service offering.

The system proposed by AT&T consists of local nodes scattered throughout the US, interconnected by high-speed digital links. The nodes, according to observers at the AT&T Press conference, would be initially built of computers made by Digital Equipment Corp.

specify a time of release for messages, which could have multiple addressees. Other facilities would allow data from various terminals to be pooled, and would permit individual messages to be built by combining sections of old messages with new material. Additionally, the address of a message could be woven into its text automatically.

In brief, the system would have features that satisfy the needs of interactive users, remote batch users, electronic mail users, users of digitised facsimile devices and users of high-speed telecommunications links.

In preparing its initial ACS

specifications, AT&T studied more than 2,000 applications of data communications in business, education and government. In addition, the company conducted detailed interviews with 85 major data communications users in 23 different industrial segments. AT&T officials also reviewed reports prepared by various outside organisations.

AT&T has made some estimates of the number of users that would be on ACS initially. Of the 3.6 million terminals and computers expected to be in use in the US by 1983, 137,000 would be attached to ACS, the company believes. This base is enough to make the service economically viable, according to the FCC filing.

In addition, there may be ACS services provided to competing carriers. AT&T's statement specified that ACS would be capable of interconnection with other networks and carrier services.

"Among the applications specified by AT&T that would be appropriate for ACS are order entry, freight control systems, travel reservations systems, medical information systems

and insurance claims processing. Three modes of message delivery would be incorporated in ACS: automatic, scheduled and demand. Automatic delivery provides routing, at the user's chosen speed and priority, between sender and receiver. Scheduled transmission provides the sender with an opportunity to specify when a message will be delivered, and demand delivery allows the receiver to tap a local storage pool and receive all messages stored therein.

The transmission schemes possible with ACS, during its initial phases, include Asynchronous transmission, synchronous transmission in block mode, synchronous transmission in polled mode, synchronous transmission in bi-synchronous mode. Additionally, host computers may engage in high-speed communications in bi-synchronous mode or use the bit-orientated protocol. Emulation of terminal networks will be available for users with a commitment to existing terminal systems so that ACS would appear to their computers as an array of terminals attached to previously used communications processors.

Messages could be stored and forwarded as users might require. In addition, users would be able to define what AT&T calls "virtual subnetworks," clusters of terminals that are interconnected in specified ways to provide intercompany facilities, an alternative to present systems of leased lines and small communications processors or terminal clusters.

If the array of standard offerings is not to a user's liking, ACS will permit customers to develop their own communications programs and have these programs inserted into the node processors of the network. AT&T personnel will be available to help users meet such special needs, thus applications that fall outside the broad definition of ACS facilities may be implemented using whatever features the user might require.

The Syntex package's four modules include an interactive terminal interface and a multi-tasking module using the Series 1 communications adapter.

Retz and colleagues set up Syntex two years ago to produce PDP-11 communications software after working on Arpanet at Stanford Research Institute, but six months ago switched over to Series 1 software.

July 27). IBM itself had only offered an X25 system for its Series 1 in France and Canada.

Software for X25 on Series 1 available soon

COMMUNICATIONS software for X25 applications on IBM Series 1 will be available in the US from Syntex Corp. of San Jose, California, in November. It should be available in Europe by next February.

Syntex President David Retz outlined his Series 1-based system, had the advantage over Telebit's TP 4000 of user-programmability. There was a good market for it, he said, especially since AT&T announced X25 capability with its Advanced Communications Service (CW,

July 27). IBM itself had only offered an X25 system for its Series 1 in France and Canada.

The Syntex package's four modules include an interactive terminal interface and a multi-tasking module using the Series 1 communications adapter.

Retz and colleagues set up Syntex two years ago to produce PDP-11 communications software after working on Arpanet at Stanford Research Institute, but six months ago switched over to Series 1 software.

Executives named

THE IBM split has been made in what was formerly called the Data Products division. That name is retained for the lower end, and takes in the Endicott, New York, plant which is involved in manufacture of the 138, 148 and components, and also the development and manufacturing of the 3080, 3090, 3091, 3092, 3093, 3094, 3095, 3096, 3097, 3098, 3099, 3100, 3101, 3102, 3103, 3104, 3105, 3106, 3107, 3108, 3109, 3110, 3111, 3112, 3113, 3114, 3115, 3116, 3117, 3118, 3119, 3120, 3121, 3122, 3123, 3124, 3125, 3126, 3127, 3128, 3129, 3130, 3131, 3132, 3133, 3134, 3135, 3136, 3137, 3138, 3139, 3140, 3141, 3142, 3143, 3144, 3145, 3146, 3147, 3148, 3149, 3150, 3151, 3152, 3153, 3154, OP SPOT

The two methods of using the program function keys: on the right-hand side of the keyboard are the twelve "physical" PFKs; and across the lower part of the screen is the light-detectable PFK line, numbers 1 to 12.

The use of program function keys

AN operations team leader contacted me in order to discuss the use of Program Function Keys on his system: an IBM 370/138, running under DOS/VS; Release 34.

At his site the 12 PFKs have a purely hardware function — they are used when the system is in RC, or reconfiguration mode.

So I contacted an expert on the matter who informed me that DOS/VS would support such a facility, but only with great difficulty.

He pointed out that such a modification would require the writing of a great deal of assembler code, and would make the supervisor non-standard. He added that he would not even consider carrying out such an operation.

This brought to my notice the stark differences between DOS/VS and OS/VS. The latter supports IBM's device-independent display operator console support system, which, thankfully, is abbreviated to DIDCOS. With DIDCOS, the PFKs are of great help to the operator.

Each of the keys is used to initiate frequently used commands so that the operator merely has to press the appropriate PFK, instead of typing the complete command and then pressing "Enter" at the keyboard.

Instead of pressing the PFKs, it is possible to display the PFK numbers in the light-detectable PFK line (see figure 1), and enter the commands by pressing the light pen against the appropriate number or by positioning the cursor and pressing the Enter key.

The PFKs are defined at the time of system generation, but the operator may alter them by use of the K, or Control com-

mand (see figure 2). They are used in either of two modes: non-conversational or conversational. The former will cause the command to enter the system as soon as the key is pressed, while the latter display the command on the screen, giving the operator the opportunity to modify it.

Figure 1
The following control command will cause the PFK numbers to be displayed on the screen:
K D, PFK
Figure 2
The command enables the operator to define the PFKs:
xx; this is the number of the PFK text; the command the PFK will initiate
Y or N; "Y" means conversational mode, and "N" signifies non-conversational.

The 12 program function keys

mand (see figure 2). They are used in either of two modes: non-conversational or conversational. The former will cause the command to enter the system as soon as the key is pressed, while the latter display the command on the screen, giving the operator the opportunity to modify it.

Figure 1
The following control command will cause the PFK numbers to be displayed on the screen:
K D, PFK
Figure 2
The command enables the operator to define the PFKs:
xx; this is the number of the PFK text; the command the PFK will initiate
Y or N; "Y" means conversational mode, and "N" signifies non-conversational.

Wages should be linked to output

It is totally unfair that the wage paid to operations staff is static in nature and therefore in no way reflects the quality or quantity of the work completed by them.

Surely it is time for companies in the computing industry to implement bonus or incentive schemes which link the output of the operations department to the wages of the operators?

Of course some will argue that the shift allowance is the operators' bonus and that on the night shift, at least, they have an incentive — to finish the work quickly in order to get home early.

And admittedly bonus schemes do not really lend themselves to sites where the workload is uniform and where there is a lot of spare machine time.

But at sites where the company sells computer time, including the services of the operators, or where there is a lot of testing and development work, they are applicable. At those installations, the amount of work placed upon the operators will be variable.

Any bonus schemes must be based upon the level of throughput achieved by the staff and should also take the amount of "lost" machine time into consideration. The latter is particularly important in the case of bureaux which provide online services.

In relation to downtime, some may say that hardware and software problems are beyond the scope of operations. That is simply not true.

If the operators are working as a team, it is sometimes possible to anticipate problems and so take action to prevent them. Under any incentive or bonus scheme, it is possible either to lump the whole operations team together or to put all the shifts in competition, so to speak.

With the first method, the operations manager could set weekly or monthly work targets. Anything in excess of the required amount could then be

used as the basis for working out a bonus.

One of the advantages of considering the operations team as a whole is that it will promote co-operation between shifts and the department will become a co-ordinated unit. This, of course, is of great benefit to the company.

However, there might be one shift which does much more

work than the others, and if that is the case the combination of the operators into one team is hardly just.

To overcome this problem, the best procedure is this — start a scheme by which the operations department is considered as a whole. If it is evident that one shift regularly does more work than the others, alter the scheme appropriately.

Plain speaking by one of our readers

ONE of the great virtues of certain members of the operations fraternity is the forthright manner in which they put their views across.

This is certainly true of an operator who contacted me in response to an Op Spot based on my visit to the Sunbury installation of BOC Dataolive (CW, July 20).

He began in praise of the piece by saying, "As an IBM operator, I found the comments made about the Amdahl machine running under MVS to be of considerable interest."

However, the praise soon gave way to criticism as he continued, "Unfortunately, as soon as my appetite had been whetted, you stopped talking about the Amdahl machine and concentrated solely on the ICL system."

He then went on to speak adversely both of the subject matter itself and the level of staff interviewed at the site.

He said, "Apart from lashing too much towards the ICL system, you quoted the manager of the ICL set-up, a shift leader, senior operator and a TP line controller."

"At any rate these are the minority. What about the views of the operators and trainees who go to make up the bulk of the operations staff?"

Regarding the subject matter,

he had two main areas of complaint.

"Firstly, as an operator, I am not interested in hearing how smoothly the development of their VME/B operating system went."

"Secondly, you went on too much about the theory of how the workload is split up on the system."

He compared the BOC piece with one I did based on a visit to the site of Queen Mary College. He gave me some advice in this regard:

"At Queen Mary College you spoke to all the operations staff and really got behind the scenes. That article gave the flavour of the computer room, so don't change the format."

While I accept several of his comments, I feel that I must reply.

First, a note such as BOC Dataolive's is very complex, with a lot of operations staff. It is just not possible to meet everyone and cover every topic.

Also I must point out that BOC Dataolive went to a lot of trouble arranging for me to speak to the staff featured in the article.

Finally, I have other installation visits in mind for Op Spot. If my critic has comments about these, or anything else which appears in Op Spot I would be glad to hear them.

Plug-compatible emulation of GE 400 due in April

THE plug-compatible emulation of the old GE 400 computer, under development at Telefile Computer Products (CW, April 6), is now set for delivery next April.

The machine, which has a 24-bit word processor, underlines the extent to which these microprocessors are revolutionising the costs of CPU development. The GE 400 emulation, like Telefile's emulations of the Signa 8 32-bit machine and the Lockheed MAC 16-bit mini, are built up out of multiple AMD 2901A four-bit bit-slice micros.

The reason for a GE 400 emulation is that there are some 200 GE 400s still running in the US, and about the same number spread over Europe, Canada and Japan, and many of these users want more power without the need to change their software. The new machine will be about four times as fast as the old GE 400, and will have a main memory of up to two Megawords.

Telefile is now planning to move up the GE range, developing upgrades for users of the GE 600 and 6000. The latter was the

predecessor of Honeywell's Level 61 and was introduced shortly before GE sold its mainframe business to Honeywell. It runs versions of the GEOS operating system little different from those currently running on the latest Level 66 machines.

Telefile also has plans to attack the Burroughs, Control Data and Hewlett-Packard bases with replacement processors as well as add-on peripherals.

Telefile's turnover in 1977 was \$11.8 million, up from \$5.9 million the previous year.

Level 61 users call for easier upgrade

USERS of Honeywell Level 61/60 systems in the UK are starting to express concern about having to upgrade to a Level 62 if they want to go over 10K main memory.

A particular cause of discontent is that their counterparts on the Continent can extend main memory to 86K bytes by upgrading to the Level 61/60-2, a machine not available in the UK and which is totally software compatible with the 61/60.

One Level 61/60 user, precision instrument manufacturer

Negretti and Zambrs, of Aylesbury, Bucks, told Computer Weekly that an upgrade to a Level 62 would involve having to install air conditioning at a cost of £10,000 and software conversion that could work out at between £10,000 and £15,000.

Another cause of anxiety was the possibility that the transaction processing software for Level 62 introduced by Honeywell only a few weeks ago (CW, June 28), would not prove as effective as the transaction software on the Level 61/60 which, unlike the Level 62, was a transaction oriented system.

Experts from Honeywell in Italy, where Level 62 is manufactured, have visited several Level 61/60 users in the UK, including Negretti and Zambrs, to talk to them about the automatic conversion tools developed by Honeywell to help 61/60 users upgrade to Level 62. Honeywell says that the aids can dramatically reduce software conversion costs but Negretti and Zambrs is still not convinced that this would be so in its own case.

Honeywell's main argument is that the Level 62 offers the 61/60 user an upgrade path with far greater potential for systems expansion than the 61/60-2, while costing little more in hardware terms.

Negretti and Zambrs conceded that the hardware rental cost of a Level 62 system would not be much greater than the rental on its 61/60 because most

of its 61/60 peripherals could be used with a Level 62 processor.

The chairman of the Level 61 users sub group, Malcolm Long, was not prepared to comment on the discontent among 61/60 users in the UK over a lack of an easy upgrade, but he pointed out that the whole matter would be discussed at the next meeting of the group on September 21. Before then he would discuss it with Honeywell.

NEWS IN BRIEF

Redundancy volunteers

NO union response to the 600 redundancies planned by Plessey (CW, July 13) is expected until after August 18. By then it will be known how many have volunteered for redundancy, and whether any of those who have volunteered would be required in other sections of the Edge Lane plant.

This gives a 10-day extension to the announced 30-day period for volunteers to come forward, since for two weeks the plant had its annual holiday shutdown.

Combs joins Xerox

PRESIDENT of Tymtel, William Combs, has left the company to join Xerox's systems development organisation in El Segundo, Los Angeles. Details of his new post have not yet been made known, except that he will be working on "a new development project."

Olivetti rights

AN online bureau service that can handle jobs like order entry, stock control and invoicing, has been introduced by Telecom Computing of Oxford. The service runs on the company's ICL 2850 under the transaction processing system developed by Telecom Computing and sold to ICL users all over the world.

WP exhibition

To promote word processing in the North-West, Stockport College of Technology is staging an exhibition of WP equipment from September 12 to 14, along with a three-day workshop. In cooperation with ICFP Training, Admission is free; and further information can be obtained on 01-940 5850.

Online bureau

ITALY's leading computer systems manufacturer Olivetti is in process of raising some £25 million in a rights issue. Three-quarters of the 40 million shares offered to existing holders were taken up, and the remaining 9.5 million are being offered for sale on the Milan stock exchange.

Data 100 takeover

THE counter-bid by Northern Telecom for control of Data 100 Corp of Minneapolis, Minnesota, has succeeded, and the Canadian company now controls 88% of Data 100's voting stock and a majority of the non-voting securities.

The counter-offer was launched by Northern Telecom, a minority stockholder in Data 100, after aerospace giant McDonnell Douglas' bid for the company earlier this year (CW, May 25). Having built up a strategic stake in the company, it seemed likely that Northern Telecom would seek to acquire control of Data 100.

The bid was made through a subsidiary, Northern Telecom Computers of Newmarket, Tennessee, the Canadian company, which was owned by Bell Canada, has been building up its interests in the US data processing market. Last year it acquired Sycor Corp, intelligent display terminal systems manufacturer of Ann Arbor, Michigan.

Exporter gets MSX

MESSAGE switching equipment from Case of Rickmansworth has replaced 12 telex machines at Tube Investments Export in Birmingham. The MSX system, costing £75,000, can re-try outgoing numbers, check for correct answer-back and send the same message to a list of addresses.

Touchdown at Green Shield

A big computer needs a big emergency back-up power source, and few computers in the NCR catalogue come bigger than the Century 300 mainframe used by the Green Shield Trading Stamp Company.

Green Shield has just moved its computer installation to a new site in Edgware, Middlesex, and at the same time invested £20,000 in a 250kVA generator from Auto-Diesel of nearby Uxbridge. Emergency power can be supplied for 13 hours before the 100-gallon diesel tank needs refilling.

Our picture shows the generator being lowered into its new home — a moment of some relief for Green Shield, because the company estimates that the company loses £100 for every hour that the computer is down. That may not sound much, but Green Shield explains that it only covers such items as salaries for punch-girls made idle by the machine being down, and not any consequential loss.

Green Shield got the Century 300 in 1976 and is discussing an upgrade with NCR. The logical upgrade would be to one of the powerful Criterion 8500 systems, or even one of the forthcoming 8500 multiprocessors.

600 ohps printer now sold in UK

A SINGLE-HEADED impact matrix serial printer with a speed of 600 cph — said to be far faster than any similar product currently available — is being manufactured by the US firm Florida Data Corp of Melbourne, Florida. Called the PB600A, the printer is now being sold in the UK by Transworld Optical Business Machines Ltd of Richmond, Surrey, the UK subsidiary of IBM Inc which is the sister company of Florida Data Corp.

The PB600A comes with a 3-megabyte solid-state drive and operates bi-directionally under the control of a Motorola 6800 microprocessor. Quoted performance figures include a throughput of 240 lpm when printing 60 x 132 character lines and 800 lpm with 20 character lines. A quoted price for the PB600A is £2100 in OEM quantities of 100.

Florida Data Corp also builds a plotter version of the PB600A which plots at a density of 225 dots per inch and can be used for plotting charts and graphs.

HINT OF THE WEEK

A faster routine for open-shop testing

THIS week's hint relates to sites which run under OS/VS1 and where an "open shop" method of job testing is employed.

With open shop testing, the programme have an area where they can submit their work via a designated reader and wait for the output.

Now testing work might have to stop at around 4.30 pm so that the system can be dedicated to the processing of live work.

After that time, all the testing work will have to be taken to the job control section. Later on, a member of the job control section will have to take it to the computer room and, later still, one of the operators will have to take it to the console.

All this movement of the work is unnecessary and takes a lot of time.

There is a much better procedure which completes two steps.

Firstly, about ten minutes or so before the testing

work is scheduled to finish, the master console operator must ensure that the reader used by the programmer places its work on the HOLD queue.

To do this he should use the following OS/VS1 MODIFY command:

xxxx, TYPRUN=HOLD

xxxx is the address of the reader being modified in order to place work on the HOLD queue.

Secondly, a person from the job control section should go to the open shop area and take the work from the programmer. He should then "hand-schedule" it (Hint, April 13) and feed it to the system by means of the modified reader. He should also prepare the appropriate documentation and give it to the master console operator.

When it is time for processing of testing work to begin, the master console operator can release the work by means of the RELEASE command.

ES is offered for cash reader's Hint published

GEOS system for private viewdata

From front page automatically for display on viewdata terminals which are effectively low-cost four-colour video terminals with an integral modem.

Private viewdata services could be set up within companies or closed user groups using the GEOS system, and an example which could get a large number of pages offloaded rapidly from the Prestel computer and then update them without further reference to the Prestel machine.

The software took two years to develop, and was written from scratch. It is not based on the Prestel viewdata software, which is written in the proprietary GEOS 4000 series Babbage language and belongs to the Post Office.

The cost of a basic editing and bulk update terminal will be about £10,000 over and above the cost of the hardware. The price includes the software and the special keyboard editing device without further reference to the Prestel machine.

The Post Office has proposed

Prizes for three after systems course

TEN students gained NCC Certificates in Systems Analysis this year after completing the one-year part-time course at Walford College. In addition, three were awarded special prizes.

The award for the best all-rounder, donated by Baric Computing Services of Letchworth, went to Keith Delworth, who was working as a social scientist with the DoT's Building Research Station at Garston while he was following the course, but who is now a market analyst with MCR. Dore is a subsidiary of ICL.

Our picture shows him receiving his award from Mr A. Baston, a member of the Management Studies Advisory Committee.

The local branch of the British Institute of Management made the award for progress in management development. This was won by Bernice Cohen, who took the systems analysis course as part of the full-time course in Business which she was following at Walford. She is now employed as a DP manager.

The prize for software went to Peter Medlar, a systems analyst at King and Hutchins. It was donated by F International.

Peter Thidell, previously a sales engineer with IES, has joined Applied Industrial Refrigeration Sales Ltd in the same capacity.

Philip Jenmet has become sales executive with Hochtief for the Goldbach range of modular flooring systems for computer rooms. Previously he was sales manager of ICL UK.

Alan Sizemore, David Chodwick, Roy Clarke and Cliff Teasdale have joined the Incentra division of Perkin-Elmer Data Systems as sales executives. Sizemore, responsible for the West Midlands, was previously a sales executive with ICL Midlands, Chodwick, who takes the North-West of England and West Scotland, was a sales executive with Cybernet Timesharing.

The East Midlands area will be the responsibility of Roy Clarke, who was formerly a sales executive with Datagraphics, and Cliff Teasdale, who will be responsible for the North-East of England and East Scotland, was also a sales executive with Cybernet.

Formerly a systems programmer with ICI Organics, James Featherstone joins Perkin-Elmer as a regional support analyst for the North of England.

David Harris-White and Pam Quinn have joined the training division of BIS Applied Systems. Harris-White, who will initially specialise in database and real time courses, was previously database analyst with Parker Pen Co; Quinn, who was most recently with Management and Executive Selection where she specialised in recruiting computer lecturers, will lecture on BIS courses and organise one-day conferences.

Roger Evans of Computer People Limited, CPL, has been promoted from managing consultant to general manager. Robin Shuter and Janet Chivers have become recruitment consultants with CPL.

Bernard Atherton has been appointed divisional general manager of the management services department at Barclays Bank. Formerly he was assistant general manager of the department.

John Newman has joined Quest Automation as systems manager for Datatrac. Most recently he was a military adviser in the computing, guided weapons and armament division at the Royal Signals and Radar Establishment at Malvern.

Jan Henry has been appointed product specialist with special responsibility for component test base and semiconductor manufacturer sales, with Microsystem Service. Formerly he was an area sales manager with International Electronics.

Duroyus Multvala joins Bell Timesharing as UK systems manager, from Datamab where he was program manager.

Michael Dudley has become director of training and marketing with ICL International and will be responsible for the monitoring and promotion of leasing in Europe and the re-marketing of ICL's CPU portfolio. Previously he was sales manager of ICL UK.

David Harris-White and Pam Quinn have joined the training division of BIS Applied Systems. Harris-White, who will initially specialise in database and real time courses, was previously database analyst with Parker Pen Co; Quinn, who was most recently with Management and Executive Selection where she specialised in recruiting computer lecturers, will lecture on BIS courses and organise one-day conferences.

Roger Evans of Computer People Limited, CPL, has been promoted from managing consultant to general manager. Robin Shuter and Janet Chivers have become recruitment consultants with CPL.

Bernard Atherton has been appointed divisional general manager of the management services department at Barclays Bank. Formerly he was assistant general manager of the department.

COURSES

THE University of Salford is offering several short courses on subjects in the computing field this year. They include courses on microprocessors, microcomputers and their applications; a first course in Cobiol training; and computer programming using Basic for teachers and lecturers. For details apply to the Administrative Assistant (Short Courses), The University of Salford, Salford, M6 4WT. Tel: 061-736 5943.

NUMERICAL COMPUTATION is the subject of a one-year Open University course for which no qualifications are required but a knowledge of calculus and matrix theory is necessary. Teaching is carried out through correspondence texts and TV and radio programmes. The application period is open until mid-October. For further details contact the Associate Lecturer, P.O. Box 76, Walton Hall, Milton Keynes MK7 6AN.

AN intensive course for designers and engineering managers on the design of microprocessor-based systems has been organised by Prodec and will be held in mid-November in Bristol, and then successively in London, Manchester and Birmingham. For details contact Prodec, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

cooperatively in London, Manchester and Birmingham. For details contact Prodec, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

PERIPHERALS AND TERMINALS

Programmer power a key component in editing CRT terminals

MOST articles about the planning, analysis, and design of computer/terminal data communications systems tend to focus on response time, transmission time, line contention, or queuing theories. While these areas are important, the system designer can often effect much greater savings in time and money when additional time is devoted to the selection of the communication system's primary I/O device — the terminal.

Recognising the significant impact of the human interface in any communications system, manufacturers of communications peripherals are devoting more time and effort to the human engineering and programmer control aspects of today's terminals.

The results of these efforts are operator and programmer-oriented products that achieve significant savings in time and money through improved operator productivity and reduced host computer loading.

representations of forms, to be written down once only, again saving operator time, communications line loading and host loading.

Since the terminal operator is the weakest link in the communications network, as far as errors are concerned, complete control of what happens on the screen is very important to ensure accuracy. If the programmer knows what is happening at the screen at all times, he can lead the operator by the hand and so reduce the errors.

Where the operator transmits one or more lines of data instead of the entire screen, the ability to read the cursor location, and then move it vertically or horizontally to the correct line and column, enables the programmer to position the cursor to the next point where operator action is required. This saves operator time. When protected fields cannot be used for some reason, this positioning prevents costly mistakes.

A simple feature such as being able to set tab stops at any position of a line allows the programmer greater latitude in programming than do the fixed tabs common in many editing terminals.

Providing the programmer with complete terminal status information, such as parity error, printer error/busy, keyboard locked and keyboard mode control switch settings, prevents needless errors, software upsets and service calls. Complete access to full terminal status information provides the programmer with more control over the screen. It allows simple error messages, such as "printer not ready", to be displayed for the operator, avoiding delays which may otherwise be encountered in these situations.

Graphic capability enables the programmer to portray forms on the screen. This tool makes the operator's job easier and helps reduce errors, especially by new operators.

Defining graphics as "protected" fields, in combination with a "clear-unprotected only" feature, assures retention of the graphic form for re-use, without requiring it to be sent down from the host again.

Graphics also break the visual monotony of the screen and allow the programmer to highlight fields of particular interest by use of the CRT's blinking, brightness and inverse video features.

The disparity between software and hardware development costs continues to widen. An extremely useful tool

PCMs fulfil a real need in the industry

By Mike Kitching

THE nature of the question, "Why PCM?" is now nearly academic. Most computer users have been exposed to the many arguments for and against, and the growth of installations with foreign peripherals is reaching sizeable proportions. The industry, however, is a long way from a true revolution and mainframe manufacturers still largely dominate the direction and philosophy of data processing, although PCMs have had an important effect on product technology, contractual and pricing practices.

It must also be said that the bulk of PCMs have concentrated on the IBM installed base, by far

the most lucrative and wide market segment in the industry. Users who have not carefully considered the possibility of utilising plug-compatible peripherals may benefit from a review of PCM development and the salient elements contributing to their growing acceptance.

The introduction of System 350 heralded the principle of compatibility, including upward compatibility of application programs, a standard method of operation under a microprogrammed operating system, and data compatibility through a standard peripheral equipment interface within the operating

system. Most of these concepts, incidentally, were developed and demonstrated by other manufacturers some years earlier.

With compatibility the PCM industry also began. Through a combination of technological improvements and keener prices, a combination which still holds today, users were for the first time offered an alternative to the total system package offered by mainframe makers. PCMs forced the introduction of single capacity tape drives and "voice-cell" motor-operated disc drives, developments which were being held back largely for marketing considerations such

as product life, product differentiation and pricing.

The threat posed by the PCMs was countered and is still being countered with shifts in technology, changes in interfaces, pricing policies aimed at competing with PCMs, and veiled and overt suggestions that the introduction of foreign peripherals would bring about dire consequences — withdrawal of system responsibility and system support, system failure, contractual invalidations, incompatibility, etc.

Today PCMs are active in every peripheral area including media products, and the mixed vendor environment is widely

accepted. Memorex in the UK, for example, are present in over 50% of the IBM installations in their area of operation. Early fears about reliability, field engineering support and compatibility have vanished.

PCMs, furthermore, continue to offer higher performance characteristics, faster delivery and a generally more flexible approach to user needs, including contractual terms. Their knowledge and application to total systems requirements goes well beyond the mere sphere of plug-in replacements. System 360 users, typically, were able to extend their CPUs' life expectancy through advances introduced by PCMs.

The immediate future will probably consist of activities of the same type, with plug-compatible, higher performance and lower cost. However, with the increasing strength of PCMs, products will be introduced which will be more than simply functional replacements.

For example, non-IBM communications controllers are now available that perform some of the functions of TCAM, but still interface to an IBM 370 in a normal manner. In the near future, we can expect high-speed, solid-state memories operating in buffers between disc storage and the main memory, with capacities in the 100 Megabyte range.

Why, then, PCMs? Essentially, because they fulfil a need in the data processing industry which no one else has attempted to address. They have entered the marketplace with the twin spearheads of innovation and lower prices. The trailblazers who accepted their wares were instrumental in giving impetus to a trend which has since benefited the industry in general, with the end-users gaining the advantage of technology

PCMs have started a trend which has had an overall beneficial effect on the industry, and DP managers have gained a degree of independence from mainframe manufacturers which they have welcomed above all else, says Mike Kitching, who was appointed managing director of Memorex UK following the merger with Telsat UK at the beginning of the year. He had been managing director of the latter since April, 1976. Kitching was previously marketing director of ITT Data Systems.

at a more reasonable cost.

PCMs were also responsible for the changes which mainframe manufacturers were compelled to bring about in the way systems are sold or leased. The veneer of mystique associated with computer systems purchase has mainly disappeared and users now have a choice — an extremely valuable asset when dealing with the monoliths of the industry.

PCMs, therefore, may be said to have started a trend which has had an overall beneficial effect. Great causes, however, are not the stuff of commerce. Commercial success is measured in sales. DP managers who opted for plug-compatible machines did so on a purely economic and operational basis, and will continue to do so only as long as PCMs can demonstrate value for money.

In the process, DP managers have gained a degree of independence from mainframe manufacturers which they have welcomed above all else. This independence — this alternative — is now the keyword to the marketing approach of the alternative suppliers.

The DP manager knows that the mainframe and PCM supplier have learnt to live together safely in his computer room.

Programmer power

• From page 11

does to make the terminal operator's job easier reduces the chance of errors creeping in. Some editing terminals not only allow the programmer to define numeric-only fields, but also allow the keyboard to lock if that format is violated.

Since groups of data which are meaningful in the application sense probably do not correspond exactly with one or more lines on the CRT screen, more efficient use can be made of the screen's limited capacity through the message approach.

Some editing terminals may be used either conversationally, or in block mode, again adding to the range of applications they can support and help out in debugging.

Other useful transmission types include the ability to send everything, to send just those fields containing modified data, or to send just unmodified data.

The Request-To-Send mode is a big help to the system designer who wants to make optimum use of the host main memory. In this mode the terminal sends a three-character code to the host

when any send key is depressed. This informs the program that data is ready for transmission and specifies which send key (or function key) has been used by the operator. After identifying the depressed send key, the program allocates the necessary storage and issues a "read" code to initiate transmission of the data.

The Request-To-Send mode can be used with any of the transmission types. In addition, as part of the "read," the host is free to ignore the operator's choice of send key and read everything, modified data only, or preselected data only, by line, by page or by message.

In this mode of operation, the host is in control, not the terminal operator. The host need not read a terminal until it is convenient to do so, and until it has available a buffer for the transmission. The buffer can be much smaller than a full page if the send line or send message capabilities are used. These main memory and time savings are especially important to the growing number of minis and even micros finding their way into small multi-terminal on-line systems.

Choice of high-speed printing technologies

By John Macdonald

WHAT is meant by high-speed printing, a term so far unfamiliar in many British computer installations? Essentially it is printing with non-impact output devices at rates in excess of about 8,000 lines a minute.

To do this requires a complete break with the impact printing techniques found in the typical line printer, which has a top speed of not much more than 2,000 lines a minute.

The quantum leap through to these new high speeds, which can reach up to 18,000 lines per minute and will rise higher, involves a switch in technologies. But which technologies?

Honeywell Information Systems believes the future lies with electrographic processes. Companies like IBM and Xerox disagree. They have plumped for electrophotographic techniques.

The companies which prove to have taken the wrong route will have the difficult task of catching up in an unfamiliar technology.

The argument between the two types of system falls into three main areas — cost, technology and future development. And the fundamental differences in each of the electrographic and electrophotographic techniques give users a choice of following very different routes.

The basic technological difference is that manufacturers of electrographic equipment have chosen to share the technology of the process between the equipment and ordinary-size dielectric paper, whereas electrophotographic equipment extends the familiar photocopying technique into HSP (High-Speed Printing) using traditional computer print-out paper.

The differences in the technologies can best be illustrated by describing two typical systems. Take first an electrophotographic system producing its output on computer print-out paper.

Although this is an extension of photocopying technology, how do you digitise a photocopying process? The answer is by using a laser beam.

A photoconductive drum is initially charged evenly over its entire surface. A xenon flash strobe projects an instantaneous image of the film negative of the required form onto the photoconductive drum. The high intensity light has the effect of imprinting an electrostatic image on the surface of the drum.

Variable data is then superimposed on the forms image by the laser beam. This is reflected from a rotating multifaceted mirror and forms a pinpoint of light on the drum, the pinpoint being scanned across the drum surface by the rotation of the mirror. Each facet of the mirror represents one scan.

The laser beam is interrupted electronically, thus giving a modulated scan of light onto the photoconductive surface in a manner similar to that of an electron beam scanning the surface of a video screen.

Dry ink toner is applied to the drum surface at a further position in the machine to develop an image before the image is applied to the plain paper. It is a fairly complex piece of electro-mechanical technology. An electrographic system will work in a completely different way. To begin with, the paper passes right through the equipment on a roll, and at various stages the printing takes place.

The first stage the paper passes is a forms cylinder where forms are created, thus eliminating the need for pre-printed stationery in most applications.

The latent forms image, which cannot be seen yet, then passes across the print head where the variable print data from the computer output is added by electrode stylus which produce a dot matrix of 200 dots to the inch horizontally and vertically. This means that a wide variety of print styles and sizes can be produced.

The paper then passes through the toner station where liquid ink is applied to a roller. The charged ink particles adhere to the oppositely charged areas of the paper and develop an image. The paper is then dried, and passes on through perforating, punching and stacking processes.

The secret of the success of this method is, of course, the special dielectric paper. Strides in paper technology during the last few years have made this a more viable proposition.

But it still upsets the cost element of the choice, and provides potential users with something of a dilemma. It could be said that for users the basic argument revolves around the cost rather than the technology.

Whereas the capital cost of electrophotographic printing systems is significantly higher than that of electrographic systems, paper for, and therefore running costs of, electrographic systems are higher.

For instance, typically, Honeywell would charge around £150,000 for a medium capacity configuration in its range of Page Printing Systems, and reckons that equivalent electrophotographic equipment would cost about £230,000.

However, paper costs on the PPS are at the moment higher. They have been as much as 70% higher than plain paper costs on electrophotographic machines. The practical effect of that was that once a user hit the two million pages a year mark on his machine, the cost advantage of the equipment was wiped out in running costs.

Changes in paper costs are, however, altering that vital equation. While the cost of plain paper for electrophotographic machines is likely to double in the next two or three years, dielectric paper will rise at a much more sedate rate, which could reduce the differential between the two to as little as 15%.

This could still create higher running costs on electrographic machines at the highest throughput levels, but it changes the arithmetic in electrographic's favour lower down the scale and, as the difference in paper cost narrows, so the electrographic technique will become economic even at the higher throughput levels.

However, the running battle between the technologies is likely to develop some interesting twists during the next two or three years. Because there are two different technologies, attempts by rival manufacturers to improve the performance of their machines will involve radically different approaches.

This, in turn, could affect the capital cost of the rival equipment to varying degrees, again changing the sums which users will have to do.

Take just one development

which is already being forecast — double-sided printing. With electrographic equipment the task of introducing this is comparatively straightforward because much of the technology is in the paper. Essentially, double-sided coated paper has to be introduced — there are certain problems about this which are currently being solved — and fairly simple changes made to the drums and dot matrices in the machine.

With electrophotographic equipment, because plain paper is being used, the printing mechanism within the equip-

ment will need to be duplicated. So users have to make a carefully judged decision, particularly if they are looking ahead. But there is little doubt that high-speed printing systems will be a major growth area of the 1980s.

And users will have to learn to look outside the traditional data processing budget for the kind of cash savings they can produce. For instance, the ability to sort output automatically by postcode as part of the printing operation means that savings can be achieved in bulk postage rates.

Other savings are made by computerising jobs which previously would not be computerised because the quality of the print was inadequate, for instance, direct mail shots.

The fact that the end-product from the electrographic technique can be an A4 size printed page rather than the traditional unwieldy print-out paper would mean greater savings and convenience in storage and filing.

Finally, there are major savings in the operational costs of post and printing activities.

Honeywell Information Systems believes that the future of high speed printing lies with electrographic processes. Other companies like IBM and Xerox disagree, and have plumped for electrophotographic techniques. John Macdonald, PPS director of marketing at Honeywell Information Systems, says that the companies which prove to have taken the wrong route will have the difficult task of catching up in an unfamiliar technology.

Rare bird.

An editing VDU that's ideal for transaction processing.

Lower software costs. Easier programming. System builders say our Model 1200 Editing Terminal is ideal for transaction processing.

The Model 1200 makes programming easier because it tells the programmer (and the host computer) the status at the terminal. Communications strap setting, printer errors, operator mode key setting, and more.

The Model 1200 also cuts down on host computer loading by automatically setting modified data "tags", whenever a field is updated, so the host computer can request only modified fields, and skip thousands of needless compare operations.

To further lighten the load on the host computer, the Model 1200 has programmable send keys that let the program regulate the amount of data returned to the computer as terminal loading varies.

More productive operators.

Thanks to a 9 x 12 character matrix, the Model 1200 has crisp, clear, strikingly sharp characters. So operators see their work better and make fewer mistakes. Data entry is incredibly accurate due to field attributes like low intensity, numeric only, blank, and inverse video.

Editing is fast and easy, too. Single keystrokes insert and delete characters and lines.

Exceptional price/performance. Only £1124*

A big 12-inch screen, 128-character ASCII set, upper and lower case, 15 cps typomatic repeat on all keys, and a 24-line display are standard.

For more information write to, or phone, Tony Beswick at Perkin-Elmer Data Systems, Terminals Division, 227 Bath Road, Slough SL1 4AX. (Tel: Slough 34511).

Distributor Enquiries welcomed.

GENERAL AUTOMATION

DPMs in the US reach for the top

THE growing importance of computers to the running of a business has led to a significant increase in the status and salaries of DP managers in the US, with some DPMs commanding salaries of up to \$135,000.

A recent survey in the UK by BIS Applied Systems showed that UK DP managers were being hit by successive pay restraint policies which have eroded differentials between management and their senior staff (CW, June 1).

According to the Wall Street Journal, however, the salary gap in the US between DP managers and their staff is increasing, partly as a reflection of the increased status of DP management within the corporate

Bank systems 'can help spot fraud'

COMPUTER systems in banks should incorporate automatic checks and alarms to help spot potential fraud, says Ryal Poppa, chairman of Pertec, the

Honeywell in Japan

AS planned (CW, July 27), Honeywell has established a new Japanese subsidiary, Honeywell Information Systems Japan Inc, in which it holds 80% of the equity. The other 20% is held by MOM, Mitsubishi Office Machinery, which has sold some Honeywell products in Japan since 1970.

The new company will concentrate principally on the Level 81 line from France, but will also sell some imported Level 84 and Level 99 systems.

Although systems based on the Honeywell Level 99 line are built under licence in Japan and marketed by NIS, NEC, Toshiba Information Systems, as the top end machines in the Area 77 line, about 10 Honeywell 6000s were sold in Japan by MOM, mainly to agricultural co-operatives, and these are due for an upgrade and are likely to be replaced by Level 66 machines built in Phoenix, Arizona, and sold by the now Honeywell company.

Big things are hatching at Data Logic

DATA LOGIC

structure.

While salaries for most DP staff have risen by about 4.5% annually since 1971, those at the top of the DP ladder have been increasing at an annual rate of 7.5% with the average salary of a DP manager rising from \$23,765 to \$36,606 in the seven years.

But the Wall Street Journal says that in some cases the rewards are far higher, with three positions recently filled at salaries of from \$80,000 to \$135,000. In addition, DP managers are likely to be in line for a variety of fringe benefits, such as bonuses and stock options.

Dependence on computer systems has also led companies to raise the status of DPMs.

● The way DP managers can equip themselves with communications skills to help improve relationships with users, and to take advantage of the increasing importance of DP, will be the main subject of a workshop 'Successful User Relations' being organised by the Institute of Data Processing Management and Computer Weekly.

CSC in \$225m Saudi deal

AN enormous contract, expected to be worth over \$225 million over five years, will shortly be negotiated by Computer Sciences Corp in Saudi Arabia.

The Saudi Ministry of the Interior wants a nationwide computer information system, and has chosen Computer Sciences to negotiate the contract. Detailed discussions will begin in September, after the Muslim Holy Month of Ramadan.

The Saudis want a complete turnkey system with central system, nationwide communications network and terminals, and in addition to expediting the processing of visitors — up to 300,000 a day in the pilgrims season — the system

Modcomp profit doubles

WITH record second quarter turnover and profit, the recovery at the Florida-based minicomputer, Modcomp, appears complete.

Profit for the quarter rose 85% to \$1.2 million on turnover up 16% at \$15.8 million. For the first six months of 1978, profit more than doubled at \$2.3 million on turnover up about 20% at \$30.5 million.

Modcomp has also announced UK prices for the new Classic 7870 processor (CW, August 3).

A 7870 with 256K words of

BC/7 gains ground in UK

ORDERS worth over £600,000 have been placed for the Univac BC/7 small business computer in the four months since its UK launch in April. There are 28 of the Intel 8080-driven machines now installed or on order, and Univac's advertising campaign for the machine has brought in some 1,700 inquiries.

The UK is currently the

Fibres giant signs up SPL

THE Fibres Division of ICI has contracted SPL International to design and implement a minicomputer system for use in the production of polyester polymers at its Wilton works.

The system, based on a Digital Equipment Corp PDP-11/34, will replace an existing computer system and will incorporate an

Prostel promoted in US

THE US promotion of the Post Office Prestel Viewdata system is gathering momentum at the New York offices and Sam Eddins, the originator of Prestel in New York, is helping to demonstrate the system.

There are now two viewdata terminals in the original one and

Claret methods were very different in 1878, when the Royal Army Pay Corps was set up to handle soldiers' pay. So were uniforms, as can be seen from this picture of a soldier (right) in the dress uniform of a Pay Corps lieutenant, circa 1878. Now, in the Pay Corps' centenary year, CMC data entry systems are used in place of manual methods and the Army is even encouraging soldiers to receive their pay by bank transfer, in place of the weekly Pay Parda held until recently at every Army depot.

NEWS IN BRIEF

Industry links with schools

THE Secretary for Education, Shirley Williams, has reaffirmed her belief in the importance of links between schools and industry (CW, March 9) by sending a circular to local education authorities asking them to review the effectiveness of such links in their areas. She emphasises the value of such organisations as the Science and Technology Regional Organisations which promote co-operation. All this is to increase the interest of pupils in "the wealth-producing sectors of the economy".

Atkinson move

THE Department of Industry has confirmed that Reay Atkinson, director of the Central Computer Agency, is to take over from Martin Lamas as head of the Department's Computers, Systems and Electronics Division. Robin Lingard, assistant secretary at SE Division, is expected to move to a different job within the DoI.

Exhibition

EIGHT different personal computers will be on show at Ed Tech '78, an exhibition of educational and communications technology at Holland Park School, London from August 22 to 24. Among the computers will be the Commodore Pet.

World survey

IN a survey of world business covering 750 major companies in 60 countries outside the US, only one manufacturer of data processing equipment is big enough to be listed, ICL. The survey is published by the US Magazine Business Week, and analyses the performance of all the key industrial companies. It shows ICL's sales for 1977 as being worth \$731.8 million producing profits of \$31.6 million.

Legal system

A COMPUTER system for solicitors has been launched by Altergo Computers which can be run on either the Formula 1 microcomputer or the Avenger minicomputer. Called Precedent, the system handles client accounts, time recording, word processing and the production of legal documents.

Dol spending

EXPENDITURE by the Department of Industry on R&D in Computers, Systems, and Electronics for the year 1977-78 was £2,896,000. This compares to the previous year's £10,371,000 and a projected figure for 1978-79 of £12,407,000. The Department's total expenditure on all areas for 1977-78 was £125 million. Among the computer research programmes that have been supported are those on computer networking, man-computer interaction, development of Coral 66, and microprocessor applications.

MICRO NEWS

France to follow the Inmos trail

IN a move that closely parallels the current developments in the British microelectronics industry, the French now seem close to launching their own advanced technology microelectronics company, called Secimos.

The plans for the company, which are still the subject of active negotiations, look remarkably similar to an amalgam of the National Enterprise Board's Inmos venture, and the new joint company being formed by GEC and the US company, Fairchild.

Like Inmos and GEC/Fairchild in the UK, it will be a new company with a French manufacturing base aimed at developing new devices in advanced microelectronics technology to meet the growing number of new market opportunities. Like the GEC-Fairchild collaboration, it would involve the direct participation of existing US-based companies in the field — in this case, both Intel and Mostek.

Intel's participation in the venture will be direct enough to include a financial stake, thought to be around the 20% mark, as well as giving the venture second source licences on selected products and its N-MOS process technology. Mostek will also be providing second source licences, but French sources indicate that its financial participation would revolve around the new French company buying out the stake in Mostek held by another US company, Sprague. Should this happen, it opens the intriguing possibility of total becoming an indirect shareholder in Mostek, one of its main competitors.

The French partners in Secimos (Société Européenne Circuits Intégrés MOS) are, however, harder to pinpoint.

As the formation of the company forms a part of a still to be finalised overall "plan" for the French integrated circuits business, the French government is certain to be a principal shareholder. Private companies such as CGE (the French equivalent to GEC in the UK) is also being tapped for an important stake, and would no doubt take an active role in running the company.

An interesting addition to the potential shareholders roster however, is the State-owned car manufacturer, Renault, which is expected to come in as a sleeping partner. France's biggest industrial company, Saint-Gobain-Pont-a-Mousson, is also understood to want a leading position in the venture, or at least one like it that would involve Intel.

As with the UK's Inmos venture, the reasons that are bringing Secimos to fruition are based on a straightforward challenge and an analysis of the current industry.

The challenge is to get the French semiconductor industry to succeed in world markets with standard products, while the industrial analysis, carried out by a small team headed by the former president of Texas Instruments in France, Monsieur Bonelli, has proved that it is possible to arrive on the market late and still succeed.

This almost exactly parallels the thinking of the NEB and MacIntosh Consultants in the development of Inmos.

The industrial analysis has identified the telecommunications market as a prime target for new product developments. It is a market that is more active in Europe than in the US, according to the French, and therefore presents the best opportunity for a European manufacturer to gain an important share of a world market, as it develops.

One of the first products for this market will probably be a Cudec (coder/decoder) system for digitising speech. This is an area already being investigated by several companies, including Intel.

Initially, however, Secimos will start operations with a range of some 10 devices second sourced from the catalogues of Intel and Mostek, a move which, it is hoped, will put the company directly into the world marketplace while at the same time benefit its own technological development. By having both Intel and Mostek second source agreements, Secimos would have alternative product solutions to many applications, hoping to expand its competitive capabilities.

Nippon claims the fastest microprocessor

TECHNICAL developments in integrated circuit design continue to push the capabilities of the devices into new realms of speed and power, and much of this development effort is now being concentrated in Japan. This has again been illustrated by the introduction of a 16-bit microprocessor by Nippon Electric, which is claimed to be one of the fastest processors produced so far.

Samples of the device, called the MicroCom 1600, are scheduled to be available later this year.

Two particular design innovations have been used to produce the device which give it a register-to-register add time of 0.5 microseconds. The primary design development employed involves the layout of the circuit elements to ensure that the interconnection paths between the elements do not exceed four microns in length. In addition, an enhancement/repletion type construction technique is used that involves the partial

incorporation of CMOS technology in the device, and leads to a low rate of power consumption that is, typically, one watt.

According to Nippon, the register-to-register add speed is faster than some minicomputer systems that are available, and between three and eight times the speed of existing microprocessors.

Up to 1-Mbit of memory will be directly addressable with the device, and it will include eight different addressing modes to improve the utilisation of program memory.

Micro chess

INTERNATIONAL chess master, David Levy, is to direct the Microchess championship which is one of the attractions being planned for a personal computer exhibition at the West Centre Hotel, London. The championship, to be held on September 21-22, will feature small computer systems playing chess against each other.

Edited by Martin Banks

Iskradata 1680 from Yugoslavia

WHAT is thought to be the first microcomputer system to be designed and built by an East European Socialist state has been introduced by the Yugoslavian electrical and electronics company, Iskra.

The system, Iskradata 1680, based on a Motorola 6800 microprocessor, follows standard architectural thinking in its design, in that a central data bus is used to allow the construction of flexible configurations.

Available for the system are single board modules for the CPU, a range of memory cards that allow expansion up to 94K bytes, and parallel and serial I/O. In addition, there are facilities for EPROM programming and oriser, and the system comes complete with a front panel console that allows direct access to the microprocessor registers.

The system can operate with teletypewriters, up to four video terminals, four floppy disc drives, and a variety of printers. Its software currently includes a monitor, basic, assembler and Disc Operating System, and some applications programs have already been developed. Additions to the software products range are expected later in the year.

Basic wage and labour costs

I AGREE with many of the points made by Geoff Beacom in his article (CW, July 20). We do, however, interpret certain words and phrases differently.

LETTERS

I do not think in terms of a fall in the value of labour so much as a reduction in its incremental cost over the cost of unemployment. Labour which is made redundant by our form of technology can be of value in alternative jobs provided the customer can pay for it. We are in the ridiculous situation of paying many unemployed to do nothing at a level which prevents an employer taking them on to provide goods and services at a price we can afford. A basic national wage on the terms I have described would help overcome this problem.

I do not agree that a BNV must be paid for by taxing the more affluent any more than they are for unemployment costs. I suggested that a BNV should be set at a level equivalent to unemployment payments. The lower salary increment paid by the employer could be such that the employee's receipts, the burden on the company economy and taxation on the rich would be the same. The important difference would be that the increment to a company's salary bill when hiring a person would be smaller. Beacom and I have an important difference in belief which creates different assumptions. I believe that, subject to the safeguard of subsistence for everyone, the free market should decide what the customer wants to buy. Beacom lays the decision at the door of a group of people who decide where and how subsidies should be paid in the hope that they decide on a service or product that the market wants. I do not say the subsidies can only be a short term measure but that, if used, they should only be used to measure to overcome a short term problem since otherwise they are countering a natural market disinterest.

In conclusion, the way of introducing a BNV and adjusting the tax methods needs careful consideration. The taxation must not nullify the incremental accounting that is the advantage of a BNV and negative taxation does not look suitable either.

Sussex.

The final indignity

IN Downtime, Chad refers to the Post Office being immune to errors in cutting off telephone connections.

We are a sub-post office and pay our telephone bill via our weekly returns to Cambridge head office. Our remittance for July, 1978, was apparently mislaid within Cambridge and we subsequently received a final demand.

Our protestations were referred to the man "with his hand on the switch" only to be told that he had no record of us being a sub-post office. Goodbye and click!

The final indignity was to get the line reconnected via the telephone kiosk which has stood in our front garden since 1937 — rent free!

Another PROLOG group

I REGRET that Michie's Privateview (CW, August 3) failed to mention all PROLOG groups. He used a sentence that gave the impression that PROLOG is only available in four places.

At least one more group is at work — at the National Civil Engineering Laboratory, NCEL, in Lisbon, Portugal. It would have been nice to have this group noted, as the machines used are different from the commercial ones listed by Professor Michie.

HELDER COELHO
Edinburgh.

I DO hope Inmos is not set up in Glenrothes merely because it is a marginal Labour seat.

GRAHAM JONES

f.m. tuner

Our article in this issue describes an f.m. tuner based on an already highly successful design by L. Nelson Jones. The author has now redesigned the circuit around two new integrated circuits which offer an even better performance. A modified and pre-aligned front end module provides a large signal handling capability and simplifies alignment.

Trends in Microprocessors. See also a general discussion on developments now taking place in 4, 8 and 16-bit devices and in bit-slice systems.

Tunable or Parametric Audio Equalizer. We describe one which functions as notch filter, shelf filter, graphic equalizer or Baxandall-type tone control.

**FLOATING POINT SYSTEMS ANNOUNCES
 AN IMPORTANT SEMINAR ON
 ARRAY PROCESSING
 A NEW IDEA IN SCIENTIFIC COMPUTING**

42 QUEENS ROAD
 READING, BERKSHIRE
 ENGLAND
 Tel. 0734-50181
 Telex 849218

For users of IBM 360/370, DEC-10, Univac 1100, Honeywell-Bull 66/60, Burroughs, Amdahl, Sigma, etc.

The AP-190L floating point array processor increases the Throughput of mainframes up to 20 fold for an amazingly low price. The array processor as a parallel processor takes over the time consuming numbercrunching in scientific programs for other assignments.

The AP1901 is the most cost effective solution to your Computer bound problem.

THE SEMINAR PROGRAM INCLUDES

INCREASE OF COMPUTING POWER
 ARCHITECTURE OF THE PROCESSOR
 SOFTWARE INTEGRATION
 MULTI USER ENVIRONMENT
 RELIABILITY (MAINTENANCE, DIAGNOSTICS)
 SOFTWARE TRANSPORTABILITY
 SOFTWARE
 — 250 STANDARD FORTRAN CALLABLE-ROUTINES
 — CROSS ASSEMBLER
 — FORTRAN COMPILER

TYPICAL APPLICATION AREAS

IMAGE PROCESSING
 SEISMIC PROCESSING
 PLASMA PHYSICS
 SIGNAL PROCESSING
 MONTE CARLO SIMULATION
 SIMULATION
 UTILITIES (POWER DISTRIBUTION, TRANSIENT STABILITY)
 STRUCTURAL DYNAMICS
 AERODYNAMICS
 ECONOMIC MODELLING

EXT

FPS WITH OVER 500 INSTALLATIONS IS ALSO THE WORLD'S LARGEST SUPPLIER OF ARRAY PROCESSORS FOR MINICOMPUTERS.

One of the two special prizes in the Computer Weekly/Dataskill essay competition, Computerstyle 2000, went to PAUL HOLDEN of Dublin, whose entry appears below. Holden, who works for Applied Management Sys-

tems, sees life as clinical, uniform and regimented. The hero, Stoddard, dreams at night of a different culture based on small communities. Just as he reaches the climax, the machine wakes him with the next day's timetable...

'Good morning Stoddard, here is today's timetable ...'

Our hero, after being given his timetable for the day, consumes his regulation breakfast. Experience had taught him that to omit it or for that matter, any of the ingredients in the meal was dangerous. One visit to the infirmary was enough.

SLOWLY, the euphoria drained away. He couldn't hold on to it. He was being dragged down. His head felt numb, and he was unable to focus on anything. The spark of light went out.

He crawled out of bed, and the luminous cursor appeared on the screen and began its tireless dance, leaving behind it a string of words.

"Good morning, Stoddard. Here is your timetable for the day."

It always began like that. He remembered, with faint amusement, how it had once made him shudder on his first day in a new place. Now it was always "good morning." Somehow, he felt, programs with bugs were more interesting.

The list of instructions — euphemistically, his "timetable" — made no more sense to him that day than any other. He had to be in certain places at certain times. He had to carry pieces of paper from one place to another. He had to sign things. He had to copy sections of text, by hand, from one piece of paper on to another. He had to read aloud from a document for half an hour in an anechoic chamber. He saw no sense in it.

Though he saw no sense in it, he knew, or rather, he felt, that it was not worth bothering to ask. There was no one to ask. No one would respond to impatient questions like that. Other citizens grew up like him, were educated like him, lived like him. They conformed, because it was impossible to consider an alternative. Whenever a stray doubt crossed your mind, the feeling of being watched intensified. The screen seemed to grow brighter. You learned not to think those kind of thoughts. It was more comfortable.

His breakfast came out of the slot. It was the usual combination. Two slabs of white cellulose lay on the plate with half a dozen pills. He knew that the bread, a tasteless mass, was only to supply bulk, and that the pills contained all the nutrients considered essential by the Department. Experience had taught him, however, that to omit it or for that matter, any of the ingredients in the meal, was dangerous. One visit to the infirmary was enough. He was lucky to have recovered from the experience.

He began on his timetable. As always, the screen knew where he was, because he was where the screen had told him to be, in each place. The screen

reminded him of his duties, where to go next and what to do there. He did what he was told.

The complex had a canteen in the basement. He had lunch there, along with the hundreds — maybe thousands, he never knew — of others in front of the dispensing machines, who placed their hands on the pad, and were delivered personalised meals through a slot. The ingredients were carefully calculated to supply the correct nutrients for their weight and height. The meal consisted of some tasteless bulk and a handful of pills.

He took the plastic plate to a table where three people, two women and a man, were already seated. He vaguely recognised two of them, but was embarrassed that he could not recall their names. He had never seen the blonde woman before. The three were talking when he sat down, discussing the weather.

"My friend in Weather," the taller woman was saying — Kama, that was her name — "told me that tomorrow would be fine, but that they had to arrange some rain for Wednesday. Something about visiting foreign dignitaries."

"Well, I hope you give us a decent summer this year," the man, his mouth full of the brown fibrous stuff, spoke up, "not like the last few years. One week sunshine, one week rain. Those guys in Weather have no imagination." The group fell silent, and Stoddard could not think of anything to contribute to the conversation.

Somebody else buzzed, and the three stood up to go, nodding at Stoddard on their way.

He knew that the bread, a tasteless mass, was only bulk and that the pills contained all the nutrients considered essential by the Department.

For the afternoon, his instructions were different. He was to report to the gymnasium for a programme of exercises. "Sport," they called it. This started appearing on his timetable some weeks previously. He had mentioned one day at lunch that he felt tired. Now his programme was such that he finished each afternoon truly exhausted.

The large screen displayed his target — 10 laps at 20 kilometres per hour. It showed that he had completed seven laps at 28.5 kilometres per hour, when he fell. He limped painfully to the console, and reluctantly, requested assistance.

He was helped to the clinic by a white-coated orderly. There was a queue in front of him — twisted ankles, like himself, cuts and bruises, and a couple of middle-aged men who had clearly overdone it, he thought. They were coughing and gasping for breath. The queue moved slowly.

He came out with his ankle bandaged up, grateful that they hadn't sent him to the infirmary. It was dark. The screen told him to report directly to the Entertainment Centre.

When he realised that he had missed dinner, a strange feeling overcame him. He remembered the last time, and he felt sick, with a mixture of fear, excitement and hunger.

Nausea gripped him during the mating session at the Entertainment Centre. It was beyond him that people used to enjoy this. As soon as he could, he went to his room, took the pills and lay down. The screen went blank.

The empty feeling in his belly swept up and over him, filling his head with a sort of numbness. When he closed his eyes, the world became more vivid, more alive. He entered this world gladly.

The first rays of the sun were playing with the drops of condensed moisture on the window when he opened his eyes. Around him in the long, seven others were waking, struggling into clothes. It was

cold. Jobina was already sitting at a terminal, occasionally jolting down some notes on a pad. Orchard was looking over her shoulder. As they came downstairs, they each helped themselves from the large black pot of oat porridge that had been on the stove all night and sat at the long table. They ate in near silence, and then began planning their activities for the day.

Their speciality was carpentry, and their skills were much in demand. Jobina reported that

she could get that old one fixed up, we can save ourselves about three hours' labour a day."

The screen flickered in response to Canace's fingers.

"Not in South-West-Nine. But hang on a minute, someone in South-West-Three can fix the mill, and they need onions and a pair of shoes. So we can do the deal with South-West-Nine through South-West-Three."

"Okay, but warn them that they'll have to wait a few weeks for their table."

The group split up, some going to the workshop, some to the fields. Stoddard and Jobina took the truck to a communal situation about ten kilometres distant, where they were needed to replace some floorboards and fix a rail on the stairs. This commune had about 50 members, considerably larger than their own — and it operated an electronic workshop, supplying the components for the information retrieval and communications network over a wide area. By common agreement, they got all their necessities and services without charge, and in return they were committed to fast and efficient maintenance, as well as regular improvements to the network.

Stoddard and Jobina worked all morning and were back in time for a lunch of bean soup with thick slices of dark brown bread. The community was noisier than at breakfast, discussing the morning's work, and planning the afternoon. Stoddard booked an hour on the terminal to continue his research into ancient cosmology by using the databank available on the system. He was correlating archaeological evidence with myths in all the continents and

there were orders in for five kitchen tables from communities within a sixty kilometre radius. They were committed to supply three of these within a month. The other two were the subject of discussion.

"But what have they got?" one of the men was saying. "One of them's a bit of a mess."

"They have leather and onions."

"Sounds like last night's dinner," someone interrupted, laughing.

"And they repair agricultural machinery."

Stoddard and Jobina worked all morning and were back in time for a lunch of bean soup with thick slices of dark brown bread. A CONFERENCE aimed at senior management and entitled the Profitable Exploitation of Microprocessors Technology has been organised by European Study Conference and will take place at the Hilton Hotel, London W1 on September 12-14. It is aimed principally at DP managers, project and user management. Further details can be obtained from Michael Naughton at Dagen on 01-438 4433.

A THREE-DAY seminar entitled Team Working for Systems Engineers and Computer Scientists will be held in Amsterdam on September 4-6. It is aimed principally at DP managers, project and user management. Further details can be obtained from Michael Naughton at Dagen on 01-438 4433.

A CONFERENCE to review and assess the state of the art in the field of Computer Communications has been organised by ISC Information Studies Limited. It will be held on September 20-22 at the Grosvenor Hotel, London SW1. For further information contact Roger Bates at A. Dunn on Chertsey 044 040 International Office Bureau.

Shylock Engineering, University College, Newport Road, Cardiff CF2 1TA, tel. 0222 42411, ext. 7073.

A PROGRAMME of word processing workshops is scheduled to take place at the Stockport College of Technology on September 12-14. It has been organised by the Management Studies Centre of ICPE. A three-day supervisory course will run concurrently with the workshops, and there will also be a display of equipment. For further details apply to Management Studies Centre, 61A George Street, Richmond, Surrey TW9 1HL, tel. 01-940 9886.

THE International Council for Computer Communications (ICCC) biennial conference is to be held in Kyoto, Japan, this year. The theme will be Evolution in Computer Communications, and the dates are September 22-28. The conference will be held at Kyoto International Conference Hall. For further details contact the ICC-78 Executive Committee, 100-010 International Office Bureau.

ICCT, 1-3 Utsunomiya-cho 1-chome, Chiyoda-ku, Tokyo 100, Japan.

MULTI-MICROPROCESSOR Systems is the title of a conference organised jointly by the Polytechnic of Central London and the French Institut de Recherches d'Informatique, IRIA. It will take place at the Polytechnic on October 2-4. For application forms write to IRIA, SEPT-Formelles, S.P. 105, 78150 Le Chesnay, France, tel. 091 90 20, ext. 875.

VIEWDATA — the paperless carriage? was a seminar presented by Mills and Allan Communications on June 21. It is to be repeated on September 27, with the address of a session by Ken Knight, entitled Introduction to Prestel. Further details from Mills and Allan at Broadwick House, 15-17 Broadwick Street, London W1M 2AB, tel. 01-438 8841.

MYRIAD APPOINTMENTS LIMITED

Computer Personnel Consultants

SENIOR PROGRAMMER

for
Problem Solving and Systems Design

CITY

c £6,250

A fast growing technical support team is seeking a potential team leader capable of translating user requirements into a working system. Following extensive training the successful applicant will support the preparation and implementation of proposals using the company's financial application packages. Operating from their City offices he/she will be responsible for junior staff, capable of giving on-job training and supervision.

Ideally you will have at least three years' programming experience in a commercial environment. Machine and language are not as important as the ability to assimilate a problem and design and test a solution using on-line terminals.

The Company, a major U.S. Bureau, has been active in the U.K. for over four years and has recently commenced a planned expansion of their marketing operation. Internal reorganisation has created this new support function and the person appointed will be the potential deputy manager of this growing department.

INTERESTED IN CONTRACT WORK IN THE NORTH?

DON'T MISS OUR INFORMAL
'CONTRACTS EVENING'

AT THE CRESTA COURT HOTEL,
ALTRINCHAM

- Find out about the many contract assignments we have available in the North.
- Get the full details of our unique 'People Package' including sick pay, holiday pay, prompt payment weekly, mortgage assistance, etc.
- Ask some of our contract staff why they've chosen to take up contract work with us.
- Meet our sales and support staff.

ABOVE ALL

Find out what your prospects are — with your programming or analysis experience — taking a contract with Computer People North.

WHEN: Tues., 22.8.78 from 8 pm to 10 pm. Wine and cheese will be provided. Wives/husbands welcomed.

WHERE: Cresta Court Hotel, Church St., Altrincham, Cheshire (on the A56)

We'll be pleased to see you — Don't miss it!

Will contract work ruin your image?

Perhaps you have some of the traditional misconceptions about contract people. So let us put you firmly in the picture. Contract staff placed by us are warmly welcomed by a long list of clients who know what they're talking about — and by their own DP people. They tell us our people play a vital role in achieving objectives which would otherwise be big problems. We get nothing but praise for the way we match individuals to user installations. We know that contract work can give you high earnings, invaluable experience and new directions. Why don't you ask us to prove it?

These are some of our current requirements

JBA

Technical Software Consultant

Croydon/Canada c.£8,000+
Our client is a fairly recently established Systems House, backed by a leading insurance company, engaged in the development of advanced ICL 2900 systems.

They have an urgent requirement for a Software Specialist with good relevant experience, whether on 1900 or 2900 hardware, especially with systems such as TPS or COMMS MANAGER. Travel to Canada is envisaged, where a luxury apartment is likely to be your base, backed by a good expense account.

A superb opportunity to gain extensive and valuable new range experience on both ICL and MINI systems. Contact: Andy Wright

Business Systems Consultants

South London Based up to £7,000
Our client, one of the major computer manufacturers in the UK, has opportunities for Business Systems Consultants to join the Customer Support group based in South London.

Applicants should have five years' experience in data processing with the majority of that spent in the design and implementation of commercial applications. For the more senior positions candidates must have undertaken feasibility studies and been involved in defining user department requirements. The Company is looking for staff with maturity, sound business background, diplomacy and the ability to meet objectives with minimal supervision.

Excellent salaries and career development. Retaining available.

Contact: Jim Baker

Systems Programmer/Analysts

Ayrshire £Extremely good

An American mini/micro manufacturer of high repute, and with arguably the best track record in the world during recent years, is currently developing a mini-based manufacturing and process control project at their establishment near the Ayrshire coast — one of the most beautiful areas in the West of Scotland. They require two DP professionals, preferably with experience of industrial systems, to join their team at a senior level to take on a large part of the design and programming work of this project, immediately. Experience of DEC hardware is desirable.

Salaries are negotiable according to relevant experience, but will certainly be extremely attractive. Relocation assistance is also available.

Contact: Jim Baker

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

JAMES BAKER ASSOCIATES, International Personnel Consultants
18 Maddox Street, London W.1. Tel: 01-491 4478

THANET JOINT COMPUTER COMMITTEE

SYSTEMS ANALYST/PROGRAMMER

To work for a go-ahead Sesside Organisation
APS/BO1 £4,773-£6,888 (inc. of supplement)

The Thanet Joint Computer Committee, who provide computing services with a Honeywell 62/40 for the Thanet and Dover District Councils, require a suitably experienced person to head one of the two-man analyst/programmer teams maintaining existing systems and developing sophisticated new systems. Consideration is being given to the use of on-line applications by both user authorities.

Applicants should preferably have a sound knowledge of systems analysis in local government and programming in COBOL.

Consideration will be given to housing accommodation and a generous disturbance allowance scheme is in operation.

Closing date: 28th August, 1978
Interview date: 6th September, 1978

Applications giving full details of experience to date to

The Computer Manager, Thanet Computer Centre
Haine Road, Ramsgate, Kent CT12 5AA

F INTERNATIONAL LIMITED SYSTEMS ANALYSTS & PROGRAMMERS

Continuing our period of planned expansion we would be pleased to meet Systems Analysts and Programmers with a minimum of 4 years' experience interested in either part-time home based or full-time opportunities within one of the country's leading software houses.

Come and meet us for informal discussion on Wednesday, August 23rd, between 1815 and 2100 hours at the Hotel Leolric, Broadgate, COVENTRY or Holiday Inn, St. Nicholas Circle, LEICESTER.

If you are unable to come along then or are interested in opportunities in other parts of the country, please contact the Personnel Officer, F International Limited, The Bury, Church Street, Chesham, Bucks (HP8 1LB) (Tel: Chesham (02405) 4988) for detailed literature.

Analyst Programmers

A Rewarding Career Move

If you have at least 2 years' PL/1 programming experience and have spent a year in systems design, then consider 3M for your next career move. (A COBOL background would be acceptable). We need ambitious programmers of your calibre to participate in an increasingly wide range of applications at our Head Office in Bracknell, Berkshire. The installation is a 370/148 under DOS with CICS and TOTAL. The on-line development work we are currently undertaking in manufacturing, purchasing and payable areas will require the IBM 3031 which will arrive in 1979.

Programming with us will bring you all the benefits of working for a large successful

organisation which lays great emphasis on the quality of life at work. We're a company which believes in giving individuals plenty of opportunity to contribute and to earn recognition early in their careers — and in rewarding them accordingly. So you'll find plenty of scope for advancement in a demanding and satisfying job.

To apply, you should be educated to 'A' level, or preferably degree standard. Experience of CICS would be an advantage. Please write with full details to: Miss D. Archer, Personnel Officer, 3M United Kingdom Limited, 3M House, P.O. Box 1, Bracknell, Berks. RG12 1JU.

COBOL Programmers

Start to £8,900 + BUPA
Specialising in the provision of conversion services to installations changing or upgrading their hardware, this company requires good COBOL programmers to help them stay on top of the most up-to-date computer technology.

Their Richmond headquarters services both Europe and the UK, so after initial training you could find yourself spending short periods abroad — supported by generous Tax-Free Allowances on top of your salary. If you enjoy programming, would welcome the chance of travel and variety, and relish the idea of keeping constantly in touch with modern equipment and ideas, you may fit into this challenging and exciting environment. First class training and promotion opportunities, relocation expenses and free life and health insurance are some of the substantial benefits available with this company. Contact: Andy Wright

Systems Analysts

E. London c.£6,000 + bonus
An ideal opportunity for relatively junior Systems Analysts (18 months experience) to undertake development of new systems including stock recording and order entry. They will join a fairly small but productive team, the members of which enjoy having responsibility for the overall commercial systems in use.

The company, part of a major wine and spirits distribution group, offer rapid promotion and corresponding salary increases, geared to productivity within their recently started five year development plan. The systems will be used on a powerful Honeywell machine.

The company will provide free three course meals (with free wine) in their waitress served staff restaurant. Contact: Mike Creamer

AUSTRALIA

If you are a programmer, systems analyst, or higher level, with at least three years post-training experience and thinking of emigrating then we can help and advise you. This extends from initial career prospects assessment to acquisition of a suitable and worthwhile position in Australia. In addition we arrange for you to receive a comprehensive information package which will assist in making accurate cost and living standard comparisons in advance. We can also advise on migration procedures and time scales.

Great opportunities, salaries, and prospects. Contact: Mike Creamer

CONTRACT

PROGRAMMERS

Are you good enough?
If so — let's get
STRAIGHT to the point

1. A personal health scheme covering sickness for six months.
2. Regular and prompt payment.
3. Tax guidance service.
4. A professional attitude towards your requirements.

We currently require Programmers to work on a complete spectrum of applications, languages and operating systems, based in London and the Home Counties.

If you can offer expertise in any of the following:

1900 COBOL OS COBOL
1900 PLAN SYS3 RPG II
DOS COBOL H6000 COBOL

+ SUBSTANTIAL
BENEFITS PACKAGE

PERMANENT POST

WEST GERMANY

INSURANCE COMPANY

PROFIT FROM YOUR LARGE IBM EXPERTISE

My client is one of the largest Insurance Companies in Lower Saxony. The location is one of the less expensive parts of West Germany, but still provides all the social and cultural benefits you would expect from a medium sized city. This post is permanent and full relocation expenses will be met by the client.

A large 168 configuration is shortly due to be upgraded by the installation of a 3033. You will play a major role in the upgrade. Your technical advice will be sought and used to make the transition as smooth as possible. The hardware supports a large number of terminals and any Tele-processing knowledge you have could help in securing you this challenging post. Likewise, a knowledge of German is not a prerequisite, but any you have will make settling in easier.

W. LONDON

INTELLIGENT PERIPHERAL PRODUCTS

YOUR CHANCE TO MOVE INTO MANAGEMENT

My client markets intelligent peripheral products that are sold worldwide. One of the main markets for this product is in the financial sector.

You will have gained some management experience, possibly in a Team Leader position and will need the ability to control and motivate a small department in a strong marketing environment.

You will report directly to the senior management of a small British company that services customers throughout the UK and Europe. Your management skills will go hand in hand with the technical competence you will exercise on a day to day basis. Relevant skills in a pre and post sales environment, particularly benchmarking could secure you this leading post.

Please telephone Geoff Marsh on 01-499 4501 for more details.

RW 33/2

RSX-11 M RTL/2 CORAL MACRO Intel 8085 BERKSHIRE

This substantially backed software house, located in an attractive Berkshire town, develops Telemetry systems for a wide portfolio of clients. The hardware used is PDP/11 with RSX-11 M and some work is now being done using Intel 8085 micro-processors. Languages currently in use include RTL/2, Coral and Macro. It is no exaggeration to state, therefore, that the company is working at the forefront of computing technology.

Growth in the business has generated several career appointments for mini and/or micro-programmers at various levels of experience. The company offers an attractive benefits package, including a salary negotiable up to £7,000 to match individual experience.

There is a very attractive working environment and the stimulation of working with enthusiastic colleagues.

Please telephone TONY BAKER on 01-499 4501 to find out more — you can lose nothing and it may very well be to your benefit.

CONTRACTORS

PROGRAMMERS - ANALYSTS - OPERATIONS STAFF

HUTCHINSON SCOGGINS CONTRACTS LIMITED is a company formed by demand. Our clients, for whom we have been recruiting over many years, have increasingly been asking us to supply contract people in addition to permanent staff.

It has always been our policy to provide these clients with the best available staff from our register. In return, our staff are offered the best assignments.

We now find it necessary to enlarge our register of contract people. If you are a mature Data Processing person with genuine experience in your trade, a pride in your achievements and enjoy variety in your working diet, it may be that we have the contract for you.

Ring Brian Dawson on 01-499 4501 for more details.

Out of hours, please leave a message on our answering machine — we will contact you.

Customer Support

London: Birmingham: Manchester
£5,000-£6,000
+ car allowance

Our clients, major international computer manufacturers based in the UK, are moving into the unit market. Their latest development is a small business computer aimed at the commercial market, particularly for small users. As part of their marketing plans they are looking for customer support analysts.

Working in their Business Systems Division you would provide technical support in a professional manner by technical surveys and presentations, or you would provide post-sales support with responsibility for implementation and installation. There is also the possibility for project involvement.

The ideal candidate would be commercially oriented and have a substantial knowledge of small or medium systems, e.g. ICL 2903, 2904, System Ten, IBM System 3, System 7, etc. He or she should have programming experience to an intermediate level and implementation knowledge. It is essential that candidates have good communications skills and an understanding of business organisation systems and objectives.

Ref: 150/CW/Fran Setter

Salesmen

Various Locations
Salary negotiable

Vacancies exist for experienced salesmen with a number of leading computer manufacturers, particularly those marketing small to medium-sized systems.

You would be involved in selling small business computers in a commercial market, mainly to small users. In some cases this will be pioneer type selling.

Ideal candidates should be experienced in hardware sales, particularly in selling to small users. Knowledge of small to medium-sized machines is essential, e.g. ICL 2903, 2904 System Ten, etc. In some cases, in addition to hardware sales, total systems sales would be useful.

Salaries generally consist of a basic plus guaranteed commission.

Ref: 151/CW/Fran Setter

To apply for any of the above positions or for further information, please telephone the Consultant concerned during working hours on 01-242 9356, or write to the above address.

If it would be more convenient to telephone in the evening, or weekend, the telephone numbers are:
Sharon Matthews - Billerica (02774) 22381. Marian Tabone - 01-555 5568. Fran Setter - 01-874 6372.

Tehran

Software Specialists
to \$£36,000 tax free
+ housing, etc.

H6000/level 66 systems software

A major US corporation currently requires experienced software specialists for a H6000 project in Tehran. These are key positions within the project team and successful candidates will be responsible for support and enhancement of the operating system and related software, including communications interface for real time and on-line applications. Candidates must therefore have in-depth experience of H6000 software, covering one or more of the following GCOS, IOS, TOS, GMAP, MDOS.

The initial contract will be for 18 months and an excellent remuneration package is offered including excellent tax free salary as above, free furnished accommodation, school fees, 20 days' paid holiday, initial and intermediate return air fares, free work transportation and comprehensive insurance cover.

Middle East

Systems Programmer
c£8,000 tax free + benefits

IBM 370 DOS/VS CICS

A leading American engineering company has computer installations worldwide, to serve the petroleum industry. A Systems Programmer is urgently required to join the data centre in Dubai. The installation consists of an IBM 370/135 which is to be upgraded to a 138 in September. Applications are general commercial systems.

The successful candidate will have a minimum of 3 years' O.P. experience including at least 1 year as a Systems Programmer using IBM Assembler, DOS/VS and CICS. A computer science degree would be an advantage, although it is by no means essential.

The company offers excellent working conditions, and benefits include 30 days' leave with a return flight to the point of origin, accommodation and an allowance for commodities.

Analyst Programmers
Programmers
Project Leader

Business Computers (Systems) Limited has recently concluded a partnership agreement with ABS, making BCL (Joint No. 1) a small business systems in the United Kingdom.

Over the last two years, our growth record has been outstanding. Now in partnership with ABS, we are set for major expansion and even larger turnover in the years ahead.

To advance the sales of the exciting Diablo Ranger 3200 office computer and intelligent terminal (over 100 systems ordered in the first nine months) and the Molecular and Multibus computers, we need more top computer talent.

If you think your record so far is good enough to impress us at BCL, you could join a dynamic sales and marketing team as a systems adviser, project leader, salesman, programmer or analyst programmer in London, Birmingham, Manchester, Leicester.

The rewards include a substantial salary and a range of fringe benefits.

Contact Eric Gilliland, Sales Director, on

01-207 3344.

Tell him your success story so far and your ambitions for the future. Or write (in confidence) to:

Business Computers (Systems) Limited
The Pagoda, 53 Theobald Street,

UNIVERSITY OF SALFORD
COMPUTING LABORATORY
Applications are invited for the post of
COMPUTING OFFICER
(Systems Software)

The laboratory provides a general computing service to the University. It is also highly involved in the North West Universities Network project which is a major development in the region. The Computing Officer will be responsible for the day-to-day operation of the laboratory and for the development of the system of the 1904S to continue the work of the 1904S in the region.

The salary will be in the range £3,000-£5,120.
Further particulars and application forms may be obtained from the Registrar, Salford University, Salford M6 6PU, and should be returned by 28th August 1978, enclosing reference SL/85/CW.

Systems Programmer

W. J. GARDNER

If you have a good systems programming knowledge of OS/VS1, this is the opportunity to put that to good use and to make a significant and immediate contribution to the setting-up of a new installation.

An IBM 370/138 is to be installed replacing current hardware and on-line and RJE facilities are to be developed.

You will be involved in the evaluation of available software and its implementation and give advice to the department as to the most effective use of hardware and software. It is essential that you are able to communicate effectively with both operations and development staff.

This is a very full role providing tremendous interest and variety, including close liaison with European centres.

The company is a manufacturing organisation, already leaders in their field, enjoying a rapid rate of growth. This expansion will have significant impact on the development of the DP department in the immediate future. Consequently, great emphasis is placed on personnel development and training.

Compensation will be in the region indicated above plus attractive relocation expenses, where appropriate.

Telephone our CROYDON office for more information or write enclosing brief details of experience quoting ref. CW29-BH.

Programmer/Analyst

Motorola's lead in the semiconductor industry has been established through continuously progressive policies and high standards of selection.

At present we are looking for a well-qualified computer professional for the key post of a Programmer/Analyst at our East Kilbride manufacturing complex.

Our modern and well-equipped computer unit operates in Italian with similar groups in Geneva and Toulouse, and we have three RJE terminals to Motorola computer centres in Phoenix and Chicago.

The man or woman appointed will have around five years experience in

programming and systems analysis and complete familiarity with IBM O/S. Experience of COBOL is essential and a knowledge of TSO would be useful. This should be backed up by experience in a manufacturing environment and a willingness to travel in Europe.

A substantial executive compensation package is offered, consisting of a generous salary and an excellent range of management benefits.

Please write with full details of your career to date to Alan Smith, Personnel Officer, Motorola Limited, Colvilles Road, East Kilbride.

South West Thames Regional Health Authority DATA CONTROL SHIFT SUPERVISOR

Tooting, London SW17

£4496-£5659*

The introduction of 2-shift working has created the need for an additional supervisor to be based at the Regional Computer Centre located in the grounds of the Springfield Hospital, Tooting, London SW17.

The person appointed will take charge of a small data control group responsible for controlling the workflow between the Regional Computer Centre and its users.

Computing, within the centre, is based on powerful ICL 1903T hardware, running under George 3, which supports a variety

of management information, financial and medical applications.

Close liaison with other Operations Department Section Heads is also an essential part of the job. Previous experience in a data control environment although desirable is not essential as full in-house training will be given.

For further details, phone me, Les King, up to 8.00 p.m., each evening, or write to: Modern Computer Services Limited, FREEPOST, London WC2N 5BR, 01-639 3351.

LOOK ANALYSTS!

MIDDLESEX

To £6500

With a major upgrade in hardware scheduled for the near future, and a corporate development plan agreed, our client's commitment to D.P. is well established. As a result of this they are able to offer an attractive future to analysts wishing to pursue an active career path, and gain experience utilising Quesada and Distributed Processing techniques.

If successful, you will probably have been involved with the development of at least one complete system. Beyond that, no specific experience is asked for, only confidence in your own ability and a desire to reach the zenith of your chosen career path.

The company offers an attractive benefit package in addition to the basic salary, and provides a modern and pleasant office environment. These positions are true opportunities for career advancement and can lead to an exciting and demanding future.

Ref. W1/1708

COBOL PROGRAMMERS

CITY OR HOME COUNTIES

c £5000

We wish to appoint a COBOL Programmer for our client, a large, well established organisation with diverse interests.

The company has offices in the City and in the Western Home Counties and successful candidates can be based at either location.

Applicants should be able to offer from one year's COBOL programming experience gained on Honeywell, Univac, Burroughs or IBM hardware. There are opportunities to gain more use contact, eventually progressing to systems analysis. Alternatively programmers can progress into the more technical software development area to broaden their knowledge of the industry.

The position carries an attractive salary which is further supported by financial benefits making a comprehensive and generous package.

3rd GENERATION IN SURREY

PROGRAMMERS £4500

£6500 ANALYST/
PROGRAMMERS

If you can offer one or more of the following, our client can offer you the opportunity to consolidate your career with a 3rd generation environment:

- ★ IBM 370
- ★ COBOL or ASSEMBLER
- ★ SYSTEMS DESIGN/IMPLEMENTATION
- ★ PROGRAM SPECIFICATION
- ★ FEASIBILITY STUDY

Because of the competitiveness of their business, it is considered essential to utilise modern computing techniques wherever possible, so the demand for data processing systems within the group continues to rise significantly. Two additional Analyst/Programmers and four Programmers are now required to strengthen the department and the salaries range from £4500 to £6500 depending on experience.

Conditions of employment are above average and the location is a quiet and attractive district of Surrey. Ref. S1/1708

PROGRAM YOUR OWN CAREER

N.W. LONDON

c £5000

Our client, one of the largest companies in their select field of operations, are keen to keep pace with the latest advances in computing hardware and technology.

They have recently installed a large mainframe in their London offices to support on-line systems from their regional centres.

They are now seeking to develop applications to streamline their services and require COBOL programmers with a minimum of one year's commercial experience who can guarantee the professional enthusiasm to assist with the introduction of the new systems.

The successful applicants will be working in an environment where DEVELOPMENT as opposed to maintenance, with DATABASE, and on-line programming techniques are available. The company also offers competitive salaries, four weeks' holiday, pension schemes, flex-time and a staff purchase scheme. Ref. N1/1708

DATSUN

ANALYSTS ANALYST/PROGRAMMERS PROGRAMMERS

We are replacing our IBM 370/125 with a 370/148 in September this year to enable us to expand our existing systems and develop the following:—

- PARTS DATABASE
- ON-LINE (AUDIO-RESPONSE) ORDER ENTRY
- DEALER ACCOUNTING SYSTEMS
- DISTRIBUTED PROCESSING
- SATELLITE LINK TO JAPAN

Our principal tools for this development will be:—

- DOS/VS UNDER VM
- CICS
- DL/1
- COBOL WITH ON-LINE PROGRAM DEVELOPMENT

If you are an experienced DP professional attracted to this challenging environment we can offer:—

- Salaries according to experience
- Benefits include — Non-contributory Pension

Scheme, Subsidised Restaurant, Preferential Discount on Staff Purchases

Our working conditions are excellent, with good Company relations.

Apply directly in writing, or by telephone for application form to:—

CONTRACTS

CORAL 66 — SOUTH COAST

We have immediate requirements for Analyst/Programmers with solid experience in Coral 66 and Real Time systems. Candidates able to offer knowledge of PDP 11s using RSX11M operating system will be given preference but this is by no means essential. Contracts are expected to run between 8 and 9 months.

BASIC + RSTS/E — LONDON & HOME COUNTIES

We are currently searching for Programmers, Analysts and Consultants to make up numerous teams to work on different development and conversion projects for various clients, incorporating a vast range of commercial applications. It is anticipated that contracts will be from 3 to 12 months in duration.

PDP 11 — CITY

Your client is currently seeking two first-class Analyst/Programmers to take two banking and investment systems from design to implementation. Candidates are likely to have at least three years' experience, of which at least 12 months will have been spent with DEC hardware. There are long-term contracts with an anticipated running length of 18-24 months.

The same client has a third contract available for a DEC orientated Systems Programmer with a sound knowledge of RSX11 to look at middleware implementation of a banking system. Experience of Real Time systems would be desirable. Length: 8 months.

IMI SUMMERFIELD

Computer Programmer

IMI Summerfield, a member of the IMI Group, carries out research into and development of solid propellant rocket motors. It is situated in a rural part of Worcestershire about two miles south of Kidderminster. A vacancy has arisen for a Computer Programmer in the Computer Section of the Rocket Motor Design and Development Department. The duties involve mainly programming together with some systems analysis of a wide variety of scientific projects. Applicants will preferably be qualified to a minimum of Higher National Certificate, together with experience of programming and/or systems analysis in a scientific

environment. The preferred programming language is Fortran 4. Candidates having, in addition, some knowledge and experience of using an assembly language may find this to their advantage. Employment conditions include a Profit Sharing Scheme, up to 23 days annual holiday and a contributory Pension Fund. Applications in writing from men and women quoting reference numbers 1579/GPT should be sent to: The Personnel Officer (Staff), IMI Summerfield, Kidderminster, Worcestershire, DY11 7RZ. Telephone: Kidderminster 4061.

Consultancy in Manchester

Leading Programmers to £5,400 + Benefits
Analyst Programmers to £8,000 + Benefits

Fraser Williams (Manchester) Ltd provides Consultancy services to a broad spectrum of existing and potential computer users in the North West. Current development projects in Commercial, Industrial, Scientific and Governmental organisations have created several vacancies for Programmers and Analysts. Candidates should be able to produce evidence of their ability and particular hardware or software expertise is less important than a sound educational background and a desire to develop a career in a challenging and varied environment. Good salaries linked to a share of profits, together with business expenses ensure a high level of earnings.

Contact Derek N. Hartley — Systems and Programming Manager.
Call 061-972 9428, reversing charges, anytime, except weekdays to 7.00pm, up to Wednesday 23rd August.

Systems Analysis & Programming

in a manufacturing environment

Rank Xerox Manufacturing Group in Welwyn Garden City utilises some of the most advanced engineering techniques in the production of a wide range of electronic assemblies and special materials.

Our small, but professional computer department develops and supports local on-line and batch systems. Hardware is PDP 11/34's for on-line systems and batch and time sharing links to large Rank Xerox Honeywell and IBM datacentres. Systems are written in COBOL, BASIC + and APL.

We now require Analysts and Programmers to help us extend our systems coverage into new functions and areas and become involved with a variety of applications aimed at improving our manufacturing performance. Increasing emphasis is being placed on the development of on-line systems for stores and shop floor operations. Current vacancies are for:

Analysts

with at least 2 years' systems experience and some expertise of manufacturing, production control and/or finance systems

Analyst/Programmers

with at least 2 years' COBOL or BASIC + experience with a desire to move towards Systems Analysis

Salaries are competitive and generous benefits include excellent pension, life assurance and sickness benefit schemes, relocation expenses, 4 weeks holiday, rising to 5, subsidised staff restaurant and active sports and social club.

So, if you've got the enthusiasm to learn new skills and want a job with real involvement in a stimulating environment, contact Andy Kennedy or Peter Brailwaite, now on Welwyn Garden City 23434 ext. 3348 or write to either of them at Rank Xerox Limited, Bessemer Road, Welwyn Garden City, Herts.

FREEPOST LONDON W4 3BR

Senior Analyst

Applications are invited for the post of Senior Analyst in the Computing Services Department. The successful candidate (male/female) will be responsible for the systems required by the Administration (e.g. Student Records System). The Polytechnic has recently installed a DEC-20 to replace a 1906E and the Administration programme are currently being converted. This post will require a good working knowledge of COBOL, preferably gained on DEC 10 or DEC 20 systems. However, knowledge of ICL 1900 COBOL or RPD2 would also be an advantage. It is unlikely that an applicant who has worked for less than three years with COBOL would be considered sufficiently qualified.

Salary: APS — £4481-£4761 plus supplement of £312 p.a.

Further details and form of application available from the Assistant Director and Chief Administrative Officer, Trent Polytechnic, Burton Street, Nottingham. Closing date: 6th September, 1978.

TRENT
POLYTECHNIC

SHIFT MANAGER

SALARY £4421-£5528

An additional shift premium of 20% will be paid during October, 1978.

The Regional Computer Unit will be introducing a third shift during October, 1978.

An ICL 19031 under Oage 3 and a CTL Modular One network are currently in use.

A wide range of computer applications are processed covering both commercial and medical activities.

The post of Shift Manager will probably suit experienced Computer Room Shift Leaders or Data Control Supervisors.

with a good knowledge of OS, who wish to broaden their supervisory and management skills.

The Shift Manager will be responsible for all activities within the Computer Room during normal working hours, and will assume responsibility for Data Control and Data Preparation during evening and night shifts provided that the Managers of these sections are not present.

Further information may be obtained from Mr. Bob White, Operations Manager — Oxford 54361 Ext. 504.

Application forms and further details from (Quoting Ref. 17778) The Recruitment Officer, Oxford Regional Health Authority, Old Road Headquarters, Oxford OX2 7LP. Tel. Oxford (0865) 54361 Ext. 205/257.

Closing date: 31st August, 1978.

Oxford Regional Health Authority

Grow with Telecomputing — nought to a £million in four years
Over 130 users of TPS — the leading software for ICL online systems
Over 60 staff working exclusively on the implementation of online systems on the ICL range

Software Design and Support

1900 2900 VME/B VME/K

Telecomputing continues to develop TPS as the outstanding tp monitor for the ICL range. We are now planning our new software for VME/B, VME/K, and for Intelligent terminals. We got it right with TPS — now is the time to join the small team who will develop and support another winner.

Applications Design and Programming

Our client services teams continue to expand to meet the growing demand for our software product and project services. We need more experienced programmers and systems analysts/designers. Junior vacancies require at least one year ICL Cobol experience; in more senior positions your specific computer background is less important. All our work is for online systems but you can learn that after you join us. Our teams have already implemented applications such as order entry systems, production engineering, stock controls and mail order. More are in the pipeline. There are opportunities at all levels. Continuous training will develop your skills and promote your career growth.

Recruiting Manager

To recruit computer systems and programming staff for Telecomputing and for our clients. All our clients are implementing advanced systems using communications terminals and need the staff to design and develop those systems. We are seeking an experienced computer recruitment officer or someone with general computer experience plus the personal qualities and motivation to handle client recruitment assignments. Flexible hours could be considered provided this includes the ability to interview applicants out of conventional working hours.

Project Managers and Consultants

Must have extensive experience in the design and development of online transaction processing systems. Telecomputing specialises in implementing advanced systems using communications terminals. We operate internationally with every client bringing his own unique system requirements and we need the senior staff to design and develop those systems.

Lecturer (Commercial D.P.)

To join a small team providing formal training to our clients. We require an established lecturer in computer disciplines or experienced computer programmer with lecturing skills and strong training motivation. You will not spend all your time lecturing. You will have the opportunity to keep abreast of the latest developments by spending part of your time working with the applications, design and programming staff.

Software Sales

To sell TPS — the leading software product for ICL communications systems. We are currently taking one order every three working days and need additional Sales Staff to respond to the tremendous demand for TPS and other Telecomputing quality software products. Computer experience and sales motivation are essential; experience of terminal systems and of software marketing are useful but not mandatory. Ideally we would like to meet system designers and programmers who have either moved or wish to move into sales.

Telecomputing started in Oxford in 1974 and has more than doubled in size each year. We are now providing advisory, training and implementation services for installing online computer systems around the world.

We have our own 2904 and a 2950 on order. Our activities are continuing to expand and we shall soon announce a microcomputer display terminal. This year we shall double in size again. When you join Telecomputing you are taking the opportunity to develop your own career in a growth company. We have an informal atmosphere and expect to pay attractive salaries and bonus.

Consultants, Analysts and Programmers

Make your career with Control Data

Control Data, a world leader in the provision of computer products, services and consulting, has an on-going investment in advanced products, services and technology.

As a result of increased business activity we are expanding our Professional Services Division and the following new positions now arise:—

DATA MANAGEMENT CONSULTANTS:

Salary £6000—£9000

To advise clients and ensure that their problems are resolved with the best available solutions and to work with them to a successful conclusion.

COMMUNICATIONS SOFTWARE CONSULTANTS:

Salary £6000—£9000

To advise clients on their data communications requirements and work with them—independently and alongside the various other divisions of Control Data—in developing and implementing the most suitable hardware/software solution.

SYSTEMS SOFTWARE ANALYSTS:

Salary £5000—£7000

To work in pre-/post-sales environments with Control Data's Cyber 170 operating systems, particularly NOS/BE.

SCIENTIFIC APPLICATIONS ANALYSTS:

Salary £5000—£7000

To provide customer and sales support for Engineering and Management applications such as:— Civil/Structural/Mechanical engineering; Pipe Stress Analysis; Linear Programming; Financial Modelling; Statistics; Project Planning/Control; Graphics (both passive and interactive).

COMMERCIAL APPLICATIONS ANALYSTS:

Salary £5000—£7000

To work in a sales and customer support capacity on such applications as:— Sales/Purchases/Nominal ledgers; Stock/Production Control; Payroll; Data Bases; Financial Systems.

NETWORK COMMUNICATIONS ANALYSTS:

Salary £5000—£7000

To provide support to the Communications Consultants in analysis, programming and implementation of software on Data Communication Networks.

MINI/MICRO SOFTWARE SPECIALISTS:

Salary £5000—£7000

To design and implement mini/micro system based applications, both stand alone and computer network oriented.

PROGRAMMERS:

Salaries range from £3500 for Trainees to £7000 for Chief Programmers/Team Leaders.

We are looking for career minded people to fill the whole range of programming skills from Junior/Trainees, Programmers, Senior Programmers, Team Leaders with experience in any of the following languages: COBOL, FORTRAN, APL, specialized mini systems language/assemblers, to work in commercial or scientific environments and on IBM, CDC and mini computers.

If you are looking for something different, a chance to stretch your abilities, and a real career opportunity—JOIN US.

We offer large company benefits including re-location expenses where relevant and the possibility of travel.

For further information contact Bruce Jones or Sylvia Nuth at 79 Wells Street, London, W.1. Tel: 01-637 0176.

It could change your way of life!

MORE THAN A COMPUTER COMPANY

INDUSTRIAL SYSTEMS EXPERIENCE?

Excellent Development Opportunities for
**SENIOR DESIGN CONSULTANTS
PROJECT LEADERS
PROGRAMMERS**

If you have at least 5 years' experience supporting your solid engineering software background in industrial automation systems and an in-depth working knowledge of any of the following:

PDP-11, RSX-11M, MACRO 11, CORAL 66, PASCAL, ASSEMBLER

then, we can offer you a choice of challenging positions.

SALARY RANGES . . . Permanent Staff . . . to £10,000 per year
Contract Staff . . . to £300 per week

For full details of these and many more interesting positions ring JIM-FORT on 01-262 2251.

Programmers

Geophysical Division

We require programmers for vacancies in our Geophysical Division in London and our Geophysics Research Branch at Sunbury-on-Thames. This latter Branch is expected to relocate to London within the next twelve months.

In London the work, involving the use of both Fortran and Assembler, consists of developing and maintaining new and existing software for processing seismic data. We have two Texas Instruments TIMAP systems which are dedicated to seismic processing and our programmers work in close liaison with the Geophysicists using this system.

In Sunbury the programmers assist Research Geophysicists in the design, development and application of data enhancement techniques in seismic processing. The work will be concerned with a general purpose system (UNIVAC 1110) and the TIMAP systems.

We are seeking applicants with at least two years' programming experience, preferably with a seismic system. A degree or equivalent in Maths, Physics or Computer Science would be a definite advantage.

Our current salary levels together with a non-contributory pension scheme, subsidised lunches and excellent sports and social facilities now represent outstanding conditions of employment.

Please write giving full details of age, qualifications and experience, quoting reference FY 581, to The Manager, Central Recruitment, The British Petroleum Company Limited, Britannic House, Moor Lane, London EC2Y 8AU.

Systems Engineers Switzerland c. £18,000 p.a.

Are you a Systems Engineer who's looking for a job that's a little bit different? A job which is secure and yet offers challenge, variety, a wide range of equipment, and international connections? Read on—we've got what you want.

Itel is one of the world's largest suppliers of IBM-compatible mainframes, marketing and maintaining a wide range of products throughout Europe, the United States, Africa and the Middle East. As a result of our continuing expansion, we are now seeking two additional Systems Engineers for our Swiss operation: one to be based in Bern, and the other in Zurich. In each case, after one year's service the job-holder will be given the option of relocating elsewhere in Europe.

Candidates should have experience of IBM large systems, and should be prepared to offer both pre and post sales technical assistance to the marketing staff when required. In addition, they should be able to rectify problems which occur in as many of the following operating systems as possible: OS, VS/1, SVS, MVS, JES2, JES3, HASP.

This is an unusual opportunity to join an expanding international company where job interest is high, and where salary plus benefits reflect your status as an expert. Why not find out more? Send a CV or make a reverse-charge phone call to Barry Martin, Itel International (Europe) Corporation, Bowater House, 68 Knightsbridge, London SW1. Tel: 584 5050.

ITEL
INTERNATIONAL

Data Processing Recruitment Consultants

Analysts+Programmers Manchester

Salaries: c. £5 - 9K

Our client is a major international company recognised as market leaders in their field and has retained Logistix to assist in recruiting the following Key project team specialists: Real-time mini programmers, Data base designers, compiler specialists, communications experts (Mini and Mainframe) Application and Software programmers. Experience of any of the following will be especially welcome: RSX-11, RTL11, BASIC, ASSEMBLER, PL/1, COBOL, IMS and

D.B. For those who enjoy overseas travel there will be ample opportunity to visit European and Middle-East locations at which our clients have offices. Successful applicants are likely to demonstrate qualities of leadership potential, determination and be self-starters. It is anticipated that you will achieve very rapid promotion within this prestigious company. Interviews will be held in Cheshire during August and offers will be made before month's end.

IBM Contracts E.E.C.

Rates: £9 - 13 per hour + overtime

We have urgent requirements for clients in Holland, Switzerland and France seeking candidates who are either available now or in the near future. A minimum of 2 years solid IBM main-frame experience is a pre-requisite. The following are just some of the openings currently available:
*DOS/VS programmers with PL/1 Holland
*IMS DB/DC programmers O.S. Holland
*IMS DB/DC Systems programmers Switzerland

*IMS DB/DC Analyst programmera Switzerland
*IMS DB/DC Analyst programmers Paris
A sound knowledge of either COBOL or PL/1 is essential for programmers and Assembler in the case of Systems programmers. Contracts range in duration from 8 weeks to 9 months but only those available within the next three weeks can be considered for these posts at this time.

Systems Engineers+Programmers Brussels+Thames Valley

Salaries: to £15K (E.E.C.) £9K (U.K.)

An internationally respected supplier of Data Base and Teleprocessing Management Systems requires for its Belgian and U.K. operations several Systems Engineers and Programmers up to consultant level. You should have current experience in the implementation and support of Data Base and/or Real Time Systems. In particular exposure to any of the following — IMS, CICS, TOTAL, ENVIRON, TASKMASTER, SHADOW or ADABAS is highly relevant. Candidates for the Brussels position should ideally (although not essentially) have some

French language ability. Additionally, there is a requirement for the U.K. based staff to travel within this country and occasionally to E.E.C. Supplemental to a high salary, you will receive extensive benefits including full relocation expense, life and disability insurance, pension plan, overseas allowances and liberal mileage allowances. Above all, these positions carry excellent prospects. Interviews will take place within fourteen days of the appearance of this advertisement.

Honeywell Level 66 Benelux

Salary Range: £12 - 16K

Our client is major international Hardware and Software Systems supplier currently developing new systems in a multi Honeywell Level 66 environment. We invite applications from Senior Programmers, Analysts/Programmers and Systems Designers who have had a minimum of two years continuous experience in one or more of the above capacities on Level 66 hardware. Candidates should preferably have had exposure to GCOS, IDS ISP or TDS, whilst the programming languages used are primarily COBOL and

occasionally FORTRAN. Specific applications experience is not regarded as essential. In the first instance you will be offered a full relocation package under a one year's (renewable) contract. On completion you will be offered an opportunity to relocate to one of the company's several European locations. These outstanding vacancies will be filled towards the end of October whilst interviews will be conducted at our offices in early September.

Micro or Mini Specialists London+Home Counties

Salaries £5 - 9.5K + Overseas Travel

Candidates should possess a minimum of one year's practical involvement in applications or software design and development in either a computer manufacturing or Systems House environment. Those who have Assembler language experience on Mini or Micro Computers particularly DEC PDP 11, DG NOVAC/CLIPSE and TI 900/9900 or specific

Micro-Processors preferably Intel 8080/5, Zilog Z80 or Motorola 6800 will be ideally suited. In addition to an above market starting salary our clients offer excellent career advancement prospects and the opportunity to travel within Western Europe. Initial interviews on our clients' premises will be held before the end of August.

An exciting future for you and London

...in a job that really counts

RIGHT NOW...

Your chance to get in on exciting computer projects destined for rapid expansion into the 1980s... You'll be working for the largest regional authority in the country providing a wide range of vital services for Londoners.

An outstanding opportunity

Because you'll find a rewarding career - as we move into our big expansion programme.

Because you'll be working with top computer systems - We've already installed:

IBM 370/158 (1 1/2 MB) IBM 370/145 (4MB) PRIME 300 but the mainframes are being extended by the end of this year to IBM 370/158 (3MB) IBM 370/148 (2MB)

Future plans:

- 2 IBM 3031s (4MB each) by August 1980
- Moving from VSI to MVS
- Extending the network beyond the present 150 terminals.

Because you'll be having a direct impact on people all over London.

Because there'll be real variety in the work - Personnel Systems...Housing...Finance...Transportation...Engineering... Information Systems...Data Base...Distributed Processing...CAD

Because we offer:

- comprehensive sports and social facilities - ranging from riding, squash, tennis to discos and drama
- restaurants and bars
- interest free season ticket loans
- generous holidays - over 5 weeks a year
- plus one day extra off per month
- flexible working hours
- ideal location - close to British Rail, Underground and bus services - close to South Bank Arts Centre
- training opportunities

Systems Programmers £4819-£6643

At least 2 years experience of IBM software - and able to work in a team. You will be working with a specialist team generating, developing and maintaining OS/VSI, CRJE, CICS RES, DL/I, ATMS/STAIRS, MVS, ADABAS, IPS, PLANCODE, ICES & MOSS.

Systems Analyst/Programmers £4819-£6643

At least 2 years IBM experience, including designing, specifying and writing programs. Knowledge of 8AL or PL/I or FORTRAN is essential and experience of teleprocessing systems would be an advantage.

ACT NOW...

- Ring Geoff Dalby (01-633 2033), Program & Support Manager, or George Goodwin (01-633 7793), Development Manager, to discuss a career in computing at the GLC.
- Contact Corinna Furse (01-633 3035) for an application form, or write to her at Central Computer Services, Greater London Council, Room 296, County Hall, London SE1 7PB

GLC Central Computer Services

UNIVERSITY OF EDINBURGH DEPARTMENT OF ARTIFICIAL INTELLIGENCE RESEARCH ASSOCIATE (SYSTEMS/APPLICATIONS PROGRAMMER)

A Research Associate (Systems) applications programmer is required to support the Department's intelligent systems research. The position involves postgraduate training and research programme. Duties will include implementing, debugging and maintaining interactive test procedures using programming languages on the Department's DEC PDP-11-40 computer, under UNIX, and developing applications software packages for use by members of the academic staff. Applicants should have a degree or equivalent qualification, in computer science or a related subject. Previous experience with DEC PDP-11 computer would be an advantage. Salary will be at an appropriate point on the Range 1A scale £3,650-£4,178 according to age, qualifications and experience.

Further particulars may be obtained from Dr. Hume, Department of Artificial Intelligence, University of Edinburgh, Forrest Hill, Forrest Road, Edinburgh EH1 2OL, with whom applications, together with the names and addresses of two referees, should be lodged not later than 15th September 1978. Please quote reference 5043.

UNIVERSITY OF NOTTINGHAM Department of Psychology

Experimental Officer (Computing)

Applications are invited for this recently-created post which requires someone with software expertise to provide and develop system resources for our PDP-11 machines. The maintenance of documentation and system software and the provision of advice and assistance in programming problems would also be important duties. The Department has a multi-access PDP-11/34 machine running RT-11 and UNIX, and several VT-40 and 58-11 machines for laboratory applications. Candidates should have a degree in an appropriate discipline and have experience in scientific and laboratory computing.

Salary will be on the scale £3,189 to £4,801 p.a. (under review according to age, qualifications and experience). Further particulars may be obtained from the Staff Appointment Officer, University of Nottingham, Forms of application should be returned by September 19th 1978. Ref No. D24.

TESSIDE POLYTECHNIC COMPUTER CENTRE

PROGRAMMER ANALYSTS (4 Posts)

The Computer Centre provides a service to the whole Polytechnic and has just installed a large Univac computer. A wide range of programming is undertaken, including systems programming and the development of applications software for the academic department, the Library and the Administration. Programmer Analysts should ideally be graduates or equivalent educational standard and preferably have two years programming experience. The starting salary will be at an appropriate point on a scale ranging from £3,000 to £3,500 p.a. (plus £1,384, to whom they shall be returned as soon as possible).

Application forms and further particulars may be obtained from Assistant Secretary (Academic), TESSIDE POLYTECHNIC, 100, TESSIDE ROAD, CLEVELAND TS1 3BA, to whom they shall be returned as soon as possible.

Satellite Hardware Checkout Systems Netherlands £10,000 +

Logical offers permanent staff positions for analysts and programmers to work on the development of satellite hardware checkout systems in the Netherlands.

You should have experience of high level language real-time programming on minicomputers. Knowledge of CORAL and Modular One experience would be particularly useful.

You should be keen to live in the Netherlands and work in an international agency in which English is the working language. Assignments will be for a minimum of one year with possible extension.

Total earnings for candidates with suitable experience will be from around £10,000.

Call Paula Freed on 01-637 9111 or write to her for an application form - Ref. CGR/H. Logica Limited, 64 Newman Street, London W1A 4SE.

If you're good, we can help you go further

Logica

Software Support Analyst Saudi Arabia £10,000 tax free

Software Support Analyst to manage a Prime 300 system in Saudi Arabia. An outstanding person with a knowledge of PRIMOS and FORTRAN who will make a creative contribution to our software, adapting the system from engineering disciplines to newly identified market-needs in commercial applications such as payroll, inventories etc. In addition to a salary of £10,000 tax free, you will receive accommodation with a two year contract and 15 days leave every 15 weeks. Interested candidates should write immediately (confidentiality is guaranteed) to the Manager International Distributor Operations, Box no 1976, Computer Weekly.

SPAN COMPUTER PERSONNEL

SMART EUROPEAN OPERATOR

Our clients, an International Banking Organisation, require a smart, intelligent operator to work in BELGIUM. Salaries £75K.

You should have the initiative and freedom to take on this challenging post which will eventually lead to a progressive career path within the group, and could provide moves all over Europe.

You will possess good communicative skills in addition to solid background in Computer Operations. A mini computer background would be ideal but other experience, particularly IBM 370, would be considered. Reporting to the European Technical Services Manager, you should possess some experience in Teleprocessing.

Any foreign languages spoken would be an added bonus but above all the prerequisite is for high calibre technical skills and an ambitious outlook on life.

Please reply quoting ref. GO 1500

2 HOBART PLACE LONDON SW1 01-235 3215

OPERATIONS PERSONNEL

I CAN FIND YOU A BETTER JOB THAN YOU CAN FIND YOURSELF

Having spent 10 years in Computer Operations, I understand and appreciate the problems involved when you contemplate a move.

Operations staff usually get the thin end of the wedge from most Recruitment Companies, but we at Span take the trouble to listen to your requirements before we act on your behalf.

Please telephone me, Glen Donnelly, so that I may be of some assistance to your search for a new position.

CONTRACT OPERATORS

We have many positions coming available in the near future please telephone for further details.

UNIVERSITY OF EXETER FACULTY OF SOCIAL STUDIES

PROGRAMMER III

The Data Processing Unit in the Faculty of Social Studies requires a Programmer III to join a team of four programmers. The Unit has an RJE link to the University ICL 72 computer.

The work is mainly of a statistical nature in the context and analysis of data banks and preference will be given to applicants with experience of programming in a statistical language and the use of statistical packages. Applicants must have a university degree in a relevant subject but previous computing experience is not necessary as training will be given.

Salary according to qualifications and experience will be within the range £3064-£3604 p.a.

Details of application stating the name of two referees should be sent to: Miss Doreen Watson, Applications Unit, Northcott House, Queens Drive, Exeter, by August 1978. Please quote reference W4 8524.

SYSTEMS ANALYST

£4750-£5250 NORTHAMPTON

We require a systems analyst to participate in systems development in existing and new design areas for our on line real time system consisting of a B3700 and a nationwide data communications network with 40+ remote terminals.

Applicants with a programming background should have 18 months commercial systems experience (preferably involving on line or data base work).

Relocation assistance will be available if necessary.

Please send career details to Martin Jones, Robert Home and Coy Ltd., Huntman House, Mansion Close, Moulton Park, Northampton.

EXPERIENCED FREELANCERS AND NEWCOMERS

If you have the following:
DIS/VS PL1
PDP/11 MUMPS
CORAL 66
IBM IMS

Telephone: MANHATTAN on (01) 531 9131

We also have a limited number of vacancies for graduates with 6-18 months experience.

ANALYSTS AND PROGRAMMERS

LOCAL INTERVIEWS FOR LOCAL JOBS.

LEEDS

Systems Analysts c.£5500
Major opportunity in a progressive company. These are ground floor appointments in a new installation and new systems under development will include on-line, real-time and distributed processing.

(C/78071)

Programmers from £5000
COBOL programmers also required and positions and salary will depend on qualifications and experience of the successful candidates.

(C/78072)

NEWCASTLE

Senior Analysts c.£6000
Major industrial company wished to recruit additional senior systems analysts. Experience in a commercial installation is essential as is a good business background.

(C/78073)

Principal Programmer c.£6250
Minimum of 7 years experience of COBOL and ASSEMBLER. Experience of all types of file handling, database and CICS. Previous supervisory experience leading more than one applications team an advantage.

(C/78074)

SHEFFIELD

Senior Systems Programmer to £6500
Progressive IBM installation needs Team Leader in its Software section. D0S, CICS, DBOMP, or DL/1 required.

(C/78059)

Systems Programmer c.£5000
A young Systems Programmer is also required for a position in the support team. IBM experience essential although not in as much depth as for the senior position.

(C/78070)

Please write or telephone Ivor Norton in confidence to arrange your local interview.

THESE ARE SPECIFIC VACANCIES FOR WHICH WE HAVE BEEN RETAINED BY THE CLIENT COMPANIES.

Ivor Norton Management Services Ltd
P.O. Box 63, Copthall Tower House, Harrogate HG1 1TS. Tel: Harrogate 66628.

FORTRAN PROGRAMMERS

West End £3750 to £5800

If you are a programmer with 12 months' or more FORTRAN experience and can see little hope of career advancement in the near future, then perhaps you ought to consider a move. An opportunity has arisen for a competent and ambitious programmer to join a large manufacturing company and so gain valuable experience in Financial Modelling and Systems Analysis on either IBM or ICL mainframes (they have both). If you also like the prospect of a Non-Contributory Pension, Season Ticket Loans, subsidised restaurant, and cheap company products, then telephone at once.

Reference PG 33/1

REAL TIME PROGRAMMERS

Central London £4000 to £8000

One of this country's most respected software houses has a number of opportunities in their Real Time Systems Division based in Central London. Positions exist at all levels from Programmers & Analysts through to Consultants. Assembler or Fortran experience in any of the following areas: Message Switching, Production Control, Military Systems or Communications, gained on Minis or Micros, would be suitable. An ability to meet and communicate with clients, an outgoing personality and the willingness to pick up new machines and languages is essential. If you believe that you could comply with the above specifications and would like a rewarding position with an excellent salary and prospects, ring us immediately.

PL1 PROGRAMMERS

West End to £5500 + Mortgage

A leading commercial organisation with an expanding 370/135 installation in the West End is seeking a number of PL1 programmers to work on a variety of new and existing projects. The positions are ideal for enterprising young programmers with at least twelve months experience on IBM Hardware. A knowledge of OS/VS1, although not essential, would be a distinct advantage.

The company offers a first class salary, and the many generous fringe benefits include Flextime, Season Ticket Loans, and a Subsidised Mortgage.

Reference JC 33/3

COBOL PROGRAMMERS

West London £3000 to £8000

A major manufacturing organisation wishes to recruit additional staff to assist in the implementation of new projects at their West London Computer Centre. They are interested in programmers with all levels of experience to work on a number of new systems which are in various stages of development. All programs are written in COBOL and experience on any major manufacturers' Hardware will be considered, as specialist training will be given where necessary to successful candidates. The company, which has diverse interests throughout industry, offers excellent conditions of employment including free lunches and Life Assurance and the opportunity to develop beyond programming into Analysis and Systems work.

Reference JC 33/4

ASSISTANT DEVELOPMENT ENGINEER

Data Systems

Newcastle upon Tyne up to £6774

Based in the engineering Division at Regional H.Q., Killingworth, Newcastle upon Tyne. The Assistant Development Engineer (Data Systems) will become the leader of a small team which is responsible for advising the Engineering Division on the application of computers especially for Grid Control and the communications and instrumentation section.

The team is responsible for the operation and continuing development of a number of IBM System 7 computers which are used for telemetry monitoring and controlling the VHF radio network. The successful applicant will also be responsible for liaison between the Engineering Division and the Region's Computer Services Department.

Applicants should have a degree in engineering, mathematics or computer sciences, and experience of real-time computer applications in the engineering industry.

Salary range £5712-£6774 inclusive of supplement pending pay award.

Application forms, quoting reference E004R, are obtainable from Personnel Division, Northern Gns, PO Box 1GB, Newcastle upon Tyne NE99 1GB, or telephone Newcastle 855682.

Closing date for applications: 25 August, 1978.

manufacturers of the

BASIC/FOUR

real-time, disc-based, mini-computers are seeking to recruit

SALES EXECUTIVES

MAI, via their subsidiary the Basic/Four Corporation, are among the market leaders in the manufacture and supply of small business systems. We have over 5000 systems installed worldwide.

A survey of users of disc-based, real-time mini-computers conducted by Datapro placed Basic/Four unequivocally ahead of the field.

In line with our European expansion we are seeking to recruit Executive Salesmen.

The people we are looking for will be well-versed in commercial applications and have at least 2 years' experience in selling bureau, VRC's or small business systems.

The rewards for the right candidates are:

- 1 Generous basic salary
- 2 Quota earnings in excess of £13,000
- 3 No upper limit on earnings
- 4 Company Car
- 5 Big Company benefits, including BUPA, etc.

You would also have, and be encouraged to exercise, the independence, that we enjoy as an autonomous subsidiary of our international parent company.

Join the team selling the most successful small business systems in the world.

Software Professionals

... build an international career with us

Part of Corning Glass Works, a large US multi-national corporation, we are the European Medical Division involved in the development, manufacture and marketing of clinical instruments and diagnostic systems.

Technical Software Supervisor

This is a challenging post and will ideally suit a self-motivated professional with a background in software/communications. You should have at least two years programming experience preferably on IBM software for IBM System 3 or 370 machines.

Analyst Programmer

You should have at least 2 years experience, including designing, specifying and writing programs for IBM equipment. Experience of COBOL or RPG2 is essential. In addition to the challenge of systems design you will have the opportunity to undertake analysis training.

Equipment used for both the above opportunities is IBM System 3/15D (192K), based at Halesfield, Essex.

An attractive salary and benefits package will be offered in addition to opportunities for advancement with our parent company in the UK, Europe and the USA.

For further details and an application form, please contact Brian Murray, Personnel Manager, Corning Medical, Corning Limited, Northern Road, Chilton Industrial Estate, Sudbury, Suffolk CO10 6XD. Tel: Sudbury (07873) 76481.

ata Computer Recruitment

HARDWARE APPLICATIONS ENGINEERS

Salary: £1,100 plus CO. CAR + EXPENSES
 MANCHESTER AND HOME COUNTIES

Our client, a major manufacturer of international repute require for the SPECIAL SYSTEMS division experienced Applications Engineers.

The division is responsible for the design of non-standard systems and devices in application areas, such as process control, graphics and telecommunications. This may involve small production rooms of specialised hardware.

The duties of the engineers are:—

- (a) to define the system in conjunction with the clients.
- (b) liaise with the software and design engineering departments.
- (c) to correlate the data and compile the costings.
- (d) prepare customer proposal with detailed product and software descriptions, and
- (e) co-ordinate delivery, installation, and maintain customer contact thereafter.

Applicants ideally should be graduates in electronics engineering or computer science, have in-depth experience of one or more of the following: systems design, hardware design, process control, telecommunications, contract negotiation and project management.

Relocation expenses include all legal fees, estate agent fees, removal costs and subsistence allowances.

For further information telephone Ian Baker on 0272 211035 or contact your nearest ATA office.

JBA

Junior Consultants

Herts/USA/Europe

Opportunities have arisen in the European Systems team of this major American company for Analysts or Analyst/Programmers to join as Project Consultants. They will provide support and advice on commercial projects of all kinds to installations throughout the UK and Europe, and applicants should therefore have a good grounding in commercial applications, preferably with a strong IBM bias. These vacancies have occurred through internal promotions to more senior levels indicating that career prospects are definitely good for able candidates. An ideal opportunity to gain experience of Project Management at Consultancy level. Travel to the USA and Europe, supported by generous tax-free allowances, will play a major part of the job. Contact: Andy Wright

Analyst/Programmers

London

Our client, an international computer services organisation has opportunities for staff to join project teams developing commercial systems. Applicants should have a minimum of two years of programming in COBOL, PL/I or RPG2 in a commercial applications environment and have been involved in the design of at least one system. Knowledge of terminal and real-time working would be an advantage. Career prospects to project leader are excellent. Salary according to experience. Large company benefits with chance to travel. Contact: Mike Creamer

HOLLAND Programming Team

We have been retained to recruit a team of IBM 370/OS/VS1 experienced programmers with a very sound COBOL background and complete familiarity with JCL. The group will comprise a team leader, three junior analysts or Senior programmers, and several junior programmers (with of local 18 months experience). The project applications area will include factory systems, material management, stock control, purchasing and work in progress. Ideal commencement date will be early October and interviews will be held during August in the UK and Holland. Lovely opportunity to experience living and working in Holland whilst earning good salaries. Contact: Mike Creamer

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

JAMES BAKER ASSOCIATES, International Personnel Consultants
 16 Maddox Street, London W1. Tel: 01-491 4478

Systems Analysts

London W1

A major British engineering and construction company has retained JBA to recruit Systems Analysts to strengthen their financial systems team. All applicants must have worked on financial systems; and for the Senior positions, a minimum of four years relevant experience is expected. The less senior vacancies would commence at salary levels of c. £6,000; Analyst/Programmers looking for a move into full systems analysis should have a minimum of three years D.P. experience. Good salaries and working conditions, plus the attraction of being part of a dynamic environment. Contact: Andy Wright

Process Control

Bracknell

A small development group has been established in Bracknell by an international engineering organisation to continue their expansion of the industrial systems market. They have immediate opportunities for mini-computer programmers and specialists to work at all levels on these projects. Applicants must have at least two years experience in industrial or process control applications using mini-computers. A sound background of FORTRAN, CORAL, RTL2 or Assembler is essential. Excellent salaries, relocation expenses and the opportunity for commissioning work in various parts of the world. Contact: Andy Wright

HOLLAND CAD/CAM Consultant

This senior position will suit a specialist in computer aided design/management wishing to apply his or her experience and knowledge in a consultancy role. The particular skills required are in the areas of interactive graphics applications, numerical control system design, part production systems and design analysis. Dealing with potential customers and assisting the sales and support teams will be the essential part of the job, as well as advising the programming and design teams. The successful candidate will have a proven track record in CAD/CAM type development and sales, be a highly personable and presentable individual with a willingness to travel and deal with people at all levels. European language ability an obvious bonus. Attractive senior staff position offering tremendous scope for creativity, job satisfaction and career development. Contact: Mike Creamer

PLAN - FILETAB - COBOL if you have 2-3 years experience in one or more of the aforementioned languages and would like to work in a small installation on applications with a difference then our clients would be very interested in seeing you. The work location is easily accessible to commuters and the company give interest free season ticket loans to assist. This is a chance to get involved in a small computer department where the work is a lot more interesting and challenging than the normal commercial applications. Any previous experience with George 2 would be definite advantage. The company offer luncheon vouchers and free membership of BUPA. For more details enquire quoting reference number.

AOC 1082

PROGRAMMER—COBOL

c£4,800 + benefits

Surrey

Required to work in an IBM environment under DOS/VS with POWER. Applicants should have a minimum of 18 months' COBOL programming experience on commercial systems. Any knowledge of ASSEMBLER would be an advantage but not essential. The company is currently involved in major redesign and development of all current systems, especially their on-line systems. If you require good job prospects and interesting work also involvement with on-line systems then this position would be of definite interest.

AOC 1045

PROGRAMMERS — COBOL-PLAN

c£4,500 +

Reigate

How would you like to be involved in the setting up of a new installation? Being one of the first in any new installation is good news for the right people. If job satisfaction is what you are looking for in your next assignment then look no further. Our client is offering relocation assistance to successful applicants who have a minimum of 18 months solid COBOL or PLAN programming on ICL machines. The company specialises in integrated accounts systems using their own specially written systems for their many clients, each system being written for individual clients so there is no modification work to existing or bought packages. This surely must be an opportunity not to be missed, enquire now for more details, quoting reference number.

OC 1141

ANALYST

c£6,000 p.a.

London SW1

Our client is a specialist organisation connected with the engineering industry. They have asked us to find an analyst with 2 years' commercial systems work to become involved with financial systems of a complex and varied nature. The work is interesting and offers opportunity to develop your analysis skills in a stimulating environment.

AOC 1092

ANALYST

c£6,000 p.a. + benefits

Oxford

We require someone who has designed and implemented at least one major commercial system on IBM or OEC equipment. In addition we need practical experience of PL1 programming. The job involves developing new, and extending existing, in-house systems and packages. Information-retrieval systems are currently being developed. Location is on the outskirts of Oxford, a pleasant rural area, and fringe benefits include a subsidised restaurant, free life assurance and flexitime working.

AOC 1108

SYSTEMS DESIGNERS

c£6,500

Essex

Our client requires systems designers to work on the analysis of new on-line systems. Applicants must have proven experience and have a practical programming experience. A knowledge of on-line systems would be useful in developing the company's expanding remote terminal facilities.

AOC 2140

CHIEF PROGRAMMER (PL1)

To £7,000 + benefits

Essex

Applicants should have a minimum of 4 years solid PL1 programming experience on financial and commercial systems. To take supervision of a team of programmers, some team leadership experience is necessary and a knowledge of on-line systems, preferably on IBM equipment. This position offers a rare opportunity to a senior person to realise his management capabilities whilst working on a variety of interesting new developments.

AOC 1140

ANALYST

Kent

Four years experience of programming and design of commercial systems qualifies you for this position. The company is an established ICL user with a sophisticated 1900 installation using driver. Knowledge of on-line systems and experience in insurance or banking would be advantageous. The requirement is for a senior person, who in addition to the normal analyst duties, is capable of arranging client meetings and taking a large measure of responsibility for current projects.

SYSTEMS PROGRAMMERS

c.£4200

British Aerospace is looking for Systems Programmers to assist with Software Development on two PDP11/45 Processors situated in their flight Development Department.

The job entails analysis of Data, recorded in flight, from sophisticated Military and Civil aircraft.

Applicants, of either sex, are expected to be educated to degree standard and to have at least two years' experience in DEC Assembler Language.

Please write, giving brief personal and career information to:

D. Stopford, Personnel Manager,
British Aerospace Aircraft Group,
Manchester Division, Woodford,
Stockport, Cheshire SK7 1QR.

BRITISH AEROSPACE

A 286 byte TOL 2870 running under the VME/B operating system has recently been installed at the Authority's Computer Services Section in central Bradford and, due to internal promotions and new systems developments, the following staff are now required:

PROGRAMMERS (COMMERCIAL)

REF. RN450

£4000-£4500 p.a.

Applicants, male and female, should be commercial programmers with at least two years' practical experience in writing COBOL programs. Previous 2800 experience is not essential as training will be available where necessary.

PROGRAMMER (SOFTWARE)

REF. RN462

£4000-£4500 p.a.

Applicants, male and female, should have at least two years' COBOL and/or FORTRAN programming experience and although operating system support experience would be an advantage, consideration will be given to applications from those wishing to move into the systems programming field. Training in 2800 and VME/B will be provided where necessary. Relocation expenses and disturbance allowances will be paid in approved cases.

For further details and application forms please telephone Leeds 44281 Ext. 278, quoting the appropriate reference number.

Yorkshire Water

O+M £7,500+ KINGSTON & THE CITY

Not a job for your average 'blinkered' analyst with an inferiority complex about O + M

On the other hand if you call yourself a business systems analyst, speak corporate planning and control with an O.R. scientist or systems analyst for the whole coffee break you will be pleased to hear that we would like to meet you.

Our company's system developments cannot be led by a quick and dirty approach. We need a touch of lateral thinking mixed in with a knowledge of behavioural science and a deep understanding of industrial technology.

We are a large commercial organisation with many divisions. We are looking for a systems analyst who is a way of life.

MINI PROGRAMMERS ANALYST & CONSULTANTS

to £15,000

Our clients, market leaders in systems and software development, with regional headquarters in Holland, are embarking on a further expansion programme for which they require numerous additional personnel. In particular they wish to recruit Mini Software and Applications Specialists, Analysts and Senior Analysts and Consultants with in-depth experience in any of the following areas:

MESSAGE SWITCHING DATA COMMUNICATIONS PROCESS CONTROL COMPUTER NETWORKS
MINI COMPUTER SOFTWARE

Assembly level programming experience is of primary importance and candidates will be expected to demonstrate enthusiasm towards the prospect of settling in Holland for an extended period. All removal expenses, initial accommodation, etc., will be met in full by our clients.

Interviews will be held in London and offers will be made to successful applicants no later than end-September.

33/18

'People who work in RPG II should not become nursemaids'

[Altergo Business Systems. 1st Career Principle].

Working on one installation for one user, that's just what happens, right? You put all your skill in and once the system's set up there's not much left to stretch your ability. Time, perhaps, to move to a more demanding situation which never lets up on you: Altergo Business Systems.

We're an autonomous company within Altergo, the most professional software group in this and thirty other countries. We're young, aggressive and talented — established as the specialist leaders in RPG II in a relatively short time — and we're looking for analysts and programmers who think they can match our reputation.

Tedium is one thing that's not part of our career plan for you. For a start you'd be changing projects no less than every nine months. Which means a lot of different problems, on constantly varied applications in different industries.

Then there's equipment. We want people experienced on hardware extending from IBM 3234 to system 3 Model 15D and we can promise you the most contemporary hardware available. And finally, your commercial prospects. Leaders we may be, but we've only just started towards our long term aim. Join us and we'll be asking for an enthusiastic commitment to a policy which seeks out and recognises individual achievement. Within the structure, there's no limit to where you can go.

Geographically, you could stay in your general location or travel far and wide. Either way you'll be well paid.

Come and talk to us if you have ambition and you want career scope. Contact Barry Whitesman on 01-734 9681 for interviews in London, Birmingham or Manchester. Or write to him at: Altergo Business Systems Limited, Warwick House, 38 Soho Square, London W1.

Anglian Water Authority MIDDLEWARE MANAGER

£9,645-£10,371
(including supplement of £312)
Ref H3D004

The Authority is implementing a regional computer service based on the use of database and data communications techniques. A network of high-speed lines connects the Authority's 19 divisions to the Honeywell dual 66/10 installed at the Computer Centre in Huntingdon.

A Manager is required to head up the Middleware group within the Computer Services Department. This Group is responsible for:

- database administration
- data communications
- technical support
- installation planning

The successful applicant will have a strong technical bias and will have spent at least ten years in data processing, including first-hand experience of implementing database and data communications systems.

The Authority offers excellent conditions of service and generous removal expenses if relocation is necessary.

If you are interested or want to know more about these opportunities, why not call Jenny Spencer at Huntingdon (0480) 58181 Ext. 370 for information and an application form.

The closing date for application is 1st September, 1978, and should be sent to:

ANGLIAN WATER AUTHORITY
Brook House, Ouse Walk
Huntingdon, Cambs.

Science Research Council ROYAL GREENWICH OBSERVATORY PROGRAMMER

There is a vacancy for a Scientific Officer in the Northern Hemisphere Observatory Procurement Team at the RGO. The successful applicant will be expected to take up duty at Herstmonceux and will be required to make frequent visits to the NHO site on the island of La Palma, Canary Islands which is approximately 8000ft. above sea level. The vacancy is permanent and pensionable.

DUTIES

1. In the RGO as a member of the NHO Project Team, to work in the NHO Computer Department on providing software to collect and analyse data from astronomical detectors using computers; including liaison with electronics engineers and other members of the NHO Division.
2. At the site to commission complete systems, to instruct visitors and staff where necessary and to assist in fault finding.

QUALIFICATIONS AND EXPERIENCE
Applicants should preferably have a good Honours degree with significant computer systems content, or have an equivalent standard of knowledge, training or experience. Experience of Fortran is desirable but training will be given if necessary. A good background in Mathematics would be an advantage.

SALARY scales £2,839-£4,415. Starting salary according to qualifications and experience.

APPLICATION forms and further information can be obtained from Mr. N. Jones, Royal Greenwich Observatory, Herstmonceux Castle, Hailsham, East Sussex BN27 1RP; telephone Herstmonceux (0323-181) 3171 Ext. 206 and should be returned not later than 15 September 1978.

OPERATORS

TOTAL EARNINGS
TO £4,500+

Experienced operators are required by a Stockbroking firm with an installation at Chingford, London, E4. The hardware involves an IBM 370/125 using DOS-POWER/VS with both local and remote teleprocessing facilities.

Contact: J. Harskovic 01-624 1925
Laing & Cruickshank
15 Hall Lane
Chingford
London, E4

Sutton, Surrey

The Crown Agents operate as financial, professional and commercial agents for about a hundred foreign governments and many more overseas public authorities and international organisations.

The Computer Division is located at Sutton in Surrey and a Honeywell Level 66/05 has recently been delivered to replace the H 1250 and H 1015 already installed.

Systems Analyst Up to £6,250

There is an immediate vacancy for a Systems Analyst to join an established team working on advanced systems for the banking and investment departments using on-line and data base techniques. Qualifications required are at least five years' data processing experience including systems design and implementation.

MH/721/CD

Analyst/Programmer Up to £5,400

An Analyst/Programmer is required to work on advanced data processing systems using Honeywell I/O and TOS software. Applicants should have at least five years' programming experience and a knowledge of Level 66 GCOS would be an advantage.

MH/722/CD

For further details and application form please telephone Miss Haine (01) 222 7730 ext. 3362, or write, quoting the appropriate reference

CHIEF PROGRAMMER

UP TO £7,000

This country's leading Party Plan Fashion group seek an experienced person to fill this important role. The computer department provides a service to the production, accounts, sales, merchandise and customer liaison departments.

Digital and N.C.R. computers are in current use, supporting 30+ terminals on-line within the company, as well as a batch processing service.

The successful applicant will supervise and schedule programming within the department and be responsible for continuing the programming standards and disciplines. Applicants should have a sound educational background, experience of over four years in programming and a detailed knowledge of NEAT/3 or MUMPS.

A salary of up to £7,000 p.a., with assistance or relocation, if applicable, is being offered.

Huddersfield (0484) 42728

UNIVERSITY OF EDINBURGH DEPARTMENT OF INTELLIGENCE RESEARCH ASSOCIATE (SYSTEMS/ APPLICATIONS PROGRAMMER)

A Research Associate (Systems/ Applications Programmer) is required to join a research team which is studying how children's mathematical skills are affected through using programming as a method of exploring mathematical processes.

Duties will include implementing a non-numerical mathematical programming language on a DEC PDP-11 machine under R111 developing systems software for the typical microprocessor and writing applications packages for use by schoolchildren. Applicants should have a degree, or equivalent qualification, in computer science or a related subject. Previous experience with the PDP-11 computer, and a working knowledge of ALGOL68, would be an advantage.

The post is available from 1st September 1978. Salary scale £3,000-£5,000, according to age, qualifications and experience.

Further particulars may be obtained from: Mr. J. Harwell Education Centre, Harwell, Oxford OX11 0AA. Telephone 0491 24141 or 0491 2466.

SCIENTIFIC PROGRAMMERS COMPUTER OPERATORS

Vacancies exist within our data processing division for Scientific Programmers and Computer Operators with some experience and an interest in

OIL EXPLORATION

Experience in Seismic Processing and/or Mini Computers a definite advantage. Our office is in Swanley, Kent, adjacent to the Swanley main-line station which is 25 minutes from Victoria.

PROGRAMMERS. Minimum qualifications are either a science-based degree or good 'A' levels in Maths or Physics, combined with some previous FORTRAN programming experience. Salary negotiable up to £4536 per annum according to experience.

OPERATORS. Candidates, though based in Swanley, will be required to work at an installation in London on a semi-permanent basis. Salary negotiable from minimum £2943 plus 20% of basic salary as shift allowance. Shift systems vary according to location but cover a 7-day/24-hour operation.

Write or phone for an application form to:
R. A. Turnbull, Personnel Supervisor, S and A House, Azalea Drive, Swanley, Kent BR8 8JR. Tel. No. Swanley 68011.

(A member of the English-China Clays Group of Companies)

THE SALES BIT

Finding where the buck stops

THE salesman can't always get it right. There is bound to be a situation somewhere along the line when, despite taking all the basic selling precautions, he suddenly discovers that the person he believed to be the decision maker has to go to some other source for final approval. This might involve a parent company board, a select committee, a direct superior or even a union.

This type of situation calls for swift action, objectivity and boldness on the part of the salesman. He must endeavour to make direct contact with the decision maker, and only a straight question can make it happen. "Who is the final decision maker? Can you contact him and see if it is convenient for us to meet briefly while I'm here?"

If the response is negative then: "Will it be easier for you to arrange an appointment for me now, or shall I contact his secretary on the way out?"

Often the prospect will respond by asking the salesman to leave everything to him. In that circumstance, it is difficult, but not impossible, for the salesman to do otherwise.

In this circumstance, the salesman has lost control of the sales negotiation. Effective selling cannot be performed by proxy, but the chances will never be improved by simply accepting the circumstances and letting the third party get on with it.

The salesman has to view the situation through the eyes of the newly revealed decision maker(s). One thing for sure, no decision is going to be made in favour of his product unless those involved know what they are expected to decide upon and why. This is where the formal sales proposal comes into its own.

More bold questions need to be asked. "When will the decision be made? How many people are on the board?" and when he knows the relevant facts: "Right, I'll prepare copies of my proposal for each of them and make sure they are delivered right away."

Perhaps, the third party will ask the salesman not to take the trouble. "It's no trouble", he should reply and then change the subject.

A covering letter should accompany each individual copy, perhaps indicating the date of the appropriate board meeting, and certainly referring to the "benefits" section.

This is essentially an unsatisfactory sales situation, but one which is handing over a bunch of technical leaflets for onward transmission will not suffice. What makes it even more unsatisfactory is that it would never have occurred if the salesman had got his pre-approach analysis right or even asked the most important question of the first sales call: "Who makes the decisions around here?"

With it.

The salesman has to view

TRADER

BOOK REVIEW

Reading for Basic understanding

Illustrating Basic, by D. Alcock. £1.00. Cambridge University Press. The Basic Idea, by R. Forsyth. £1.95. Chapman and Hall.

ALTHOUGH both of these introductory books are written for students without any prior knowledge of computing, the approaches they follow are diametrically opposed.

While both authors acknowledge the lack of standardisation in Basic, Alcock accordingly treats the "need for portability as an axiom" and describes the language so that programs may be written without dependence on any particular version of Basic.

Forsyth adopts the policy of sticking to one representative implementation of Basic, namely Digital Equipment's. This later approach severely limits the utility of the book.

To be fair, Forsyth does give students some guidelines to be followed when portability is required, but these occur almost as an afterthought in the last chapter and occupy less than half a page.

On the other hand, some students may find Alcock confusing in that he often underestimates several possibilities in describing

CORNELIA BOLDYREFF

Puzzle answer

THE formula is: Constant = $\frac{1}{2}(n^2 + n)$, so the constant for a 10 x 16 square is 255.

A move to Southampton offers Computer Staff more than just a change of address.

Southampton City — Right at the Centre of Things — Ideally situated close to South Coast Resorts. Easy access in the New Forest and the West Country. Superb sporting and leisure facilities. A fine shopping centre. Just a few of the benefits a move to Southampton could bring Computer People who want more out of life than just job satisfaction.

Southampton City Council has a number of vacancies in its Computer Division for suitably skilled staff. Employment benefits include —

● Subsidised Canteen ● Staff Social Club ● Job Security, and dependent upon circumstances.

£500 removal and resettlement allowance
£10 per week lodging expenses (up to six months)
Temporary housing accommodation.

Immediate vacancies within the Division include

SYSTEMS ANALYST/PROGRAMMERS

Workload in the Division has created an urgent need for people with varying degrees of practical experience of DOS/VS and who have a knowledge of COBOL. Preference will be given to those with formal qualification. Salaries are negotiable up to £5,073 p.a. according to experience. Working hours are flexible.

COMPUTER OPERATOR

An operator experienced in the operation of the IBM 370 using DOS/VS is required. The successful person will join a skilled team and should be prepared to work alternative shifts over a five-day week with overtime working to meet peak loads. Salary up to £3,651 p.a. plus shift allowance of 14%.

Our hardware comprises an IBM 370/125/2 with 3340/44 Disc System and mag. tape; a Burroughs B80 Mini for cash receipting and a Redifon Seecheck System for Data Entry.

For further details and application form contact the City Treasurer, Civic Centre, Southampton SO9 4XD. Tel: Southampton 23855, Ext. 488.

(Closing date for applications is 30th August.)

Wrangler

SYSTEMS ANALYST/PROGRAMMER

Wrangler, one of the world's leading manufacturers of furniture, is now offering an interesting job to an enthusiastic professional who has at least 1-2 years' systems and programming experience in a commercial environment. You must have a knowledge of COBOL or RPG and any experience of on-line systems could be a possible advantage.

You will join a small EDP team at our Head Office and Distribution Centre in Calverton and have the opportunity to become very involved in the activities of the site. The Company has an IBM System 3 and knowledge of this hardware would be useful. Men or women interested in this position should telephone or write for an application form to:

Mr. Alan J. Osborn, Personnel Manager
BLUE BELL APPAREL LIMITED
Calverton, Nottingham
Tel: Woodborough 3086

Lothian Health Board

A Great Community Service

SENIOR SYSTEMS DESIGNER

Scale 14 — (£5,437-£6,715 per annum)

A vacancy has arisen in the Computer Services Unit for an experienced Senior Systems Designer to work within the Health Service on behalf of the Computer Consortium of the Lothian, Fife and Borders Health Boards.

The post involves responsibility as project leader for a small team of designers and programmers working mainly on medical applications. Opportunities will be provided to work on financial and other application areas where appropriate.

The unit has ICL 1903T, 7602 and CMC 5200 equipment and there are off-line links to other sites.

Candidates should have considerable experience in computing and a proven ability to design and install complex systems. A relevant professional or academic qualification is desirable and knowledge and experience of computing in the Health Service would be an added advantage.

Further details and application forms can be obtained from the Personnel Officer, 11 Drumshugh Gardens, Edinburgh EH9 7QD, to whom completed applications should be returned by 1st September, 1978. Please quote reference LHB/0278.

Ascii through the Logic Gate

An epic in 32K words, by Richard Forsyth
Block 11 (Physical Block)

Hex and Zap are still up in the mountains awaiting Cien and Lambda, unaware of their plight; and now Ascii has disappeared.

"Ascii's gone!" Hex's shout woke Zap.

"Cool it, will you?" snorted Zap.

"But we're in trouble. We've got to do something."

"We always were. What do you suggest?"

"We'll have to go and find him."

"How?"

"By radar."

"You mean he won't maintain radio silence? Then we're better off without him," stormed Zap. "He'll lead the whole pack onto us."

Hex was infuriated by Zap's defeatist attitude. There were times when he clearly regretted leaving the security and logic of the System in work alongside a bunch of crackpots. However on this occasion Hex had to admit he had a point.

"We could follow his tread marks," ventured Hex lamely.

"And what happens when Cien and Lambda arrive to find us gone?"

The exchange had gone badly for Hex, and he knew it. He took stock. His one reliable dependable ally was lost. The two girls were probably in dire straits, perhaps even in the hands of the Error Squad. Zap was subject to bouts of cantankerousness, and apparently believed that with their limited resources they could hope to achieve little more than a token Kamikaze mission. On top of this, they had neither offensive nor defensive weapons; and needless to say had yet to decide on a strategy. The outlook was undeniably bleak.

At that moment a small lump of earth, dislodged higher up the tunnel, rolled down and hit Hex in the back. He sprang up like a startled deer. From beyond their view came the sound of footfalls.

"Anyone at home?" echoed a tentative greeting.

Hex recognised Cien's voice. His feelings were too strong and too mixed even to experience without perplexity, let alone to express. It was left to Zap to answer the call.

Shortly afterwards Ascii entered. Cien followed, limping and supported by her sister.

"Sorry we're a bit late," said Cien.

"Ascii scared us," added Lambda. "He came down to help us with the final ascent."

Hex could see that Cien's knees were covered by two discs of caked blood, but her spirit was undimmed.

"I could do with a bath," she proclaimed. Hex led her, hobbling, down to the pool in the centre of the crater. She dipped a toe in the water. Immediately she recoiled. "It's hot!" she exclaimed. "It was freezing last time."

Hex immersed one finger, then his right hand. It was distinctly warmer than the previous morning when it had been lukewarm.

"We've got a warm spring," he replied. "I noticed it yesterday, but today it's a bit hotter. It could be medicinal. Go on, take the plunge!"

Before she could reply, Zap and Lambda had joined them, bent on horseplay, and moments later all four were splashing around in their private heated swimming pool like children, with Ascii barking excitedly on the water's edge.

After their dip, they made plans. As night fell they were engaged in deciding how to strike their first real blow against the Network. Hex favoured adapting Dr Null's concept and equipping Ascii as a gigotic de-stabilizer, to exploit the System's vulnerability to gigotic induction; but Zap had his own ideas.

"What do you know about gigotic processes?" began Hex.

"We had a lecture from Igor Gigotski himself in my first year at Broinstorm College," replied Zap. "He told us about the standard counter-measures."

"But Gigotski perished in Russia forty years ago."

"Well, he looked in good shape to me."

This not only undermined Hex's fundamental premise, it eroded his faith in Dr Null's last confession. While he tried to reconcile it with what he knew, Zap got into his main theme.

"The only way to blow the System's collective mind is with LSD."

It sounded like a blast from the past. "With what?", Hex queried.

"LSD — Large Scale Disintegration. I've thought it all out. The System depends on the integration of astronomical numbers of incredibly tiny components, all based on wafer-thin slices of a silicon substrate. It is literally built

on sand. Dissolve that, and you break up the System."

"A hardware solution?" was Hex's reaction. "It didn't appeal to him."

"The hardware they come, the hardware they fall," said Zap, misquoting Dr Null.

"But what do we dissolve it in?"

"The most powerful solvent known in the mind — Leibnizian Syllabic Acid, the only substance that can be transmuted along wires in monadic form and re-materialized by a signal pulse."

"Don't blind us with science," commented Hex. "You're saying you're going to drug the entire System."

"Like they've never been zapped before."

"Can we make this stuff?" asked Lambda.

"We don't need it," stated Cien, before Zap could reply.

They turned to look at her. When she had their undivided attention, she continued. "There's a vat of it at Spracklet's Hole. They used to press mushrooms and ferment the juice using their own special recipe. I think that's what got them bashed in the first place."

"Right, that's settled," concluded Zap. "We get down there and pump it into the Network's arteries. Let's have a show of hands."

Only Hex's arm did not rise. In vain, he tried to persuade them that the effects would not spread fast enough and could be localised, unlike a gigotic field. Their minds were made up.

"Now all we need do," said Zap, "is pick a name for ourselves to go down in history. How about The Circuit Breakers?"

Cien suggested 'the human rights movement' but got no support. After some disputation Hex proposed 'the geng of 414'.

"I see," said Cien. "four people and a dog."

"No," chorused the three onlookers in unison, "four automata and a human," and burst into laughter.

The insult hurt Cien deeply. The atmosphere became suddenly charged. In the semi-dark cave Hex reached out and put a hand round her shoulders to comfort her. Before he knew it, he was kissing her full on the mouth.

Could this be the start of something? Yes.

© 1978, Richard Forsyth, RAIN Timekeeping.

ANALYST/PROGRAMMER FOR DP AUDIT

Midx. Between £5133-£6012

The DP Audit Section of Eastern Gas at Enfield require an Analyst/Programmer who will be involved in the independent appraisal of the Region's computer based systems.

Reporting to the Assistant Audit Manager (DP), your work will involve the writing of TABN/ETL and COBOL programs as an aid to the review of the Region's systems, and you will be expected to liaise both with Management Services and the other Audit functions with regard to controls over systems and the computer hardware/software. The ability to communicate with all levels of management is therefore of utmost importance.

The installation currently comprises three ICL 1600 mainframes which are scheduled for replacement by dual 2872's. This conversion is being closely monitored by DP Audit and is an example of the wide range of activities undertaken by the section.

The salary range will be £5133-£6012 according to your experience.

For further details of this excellent career opportunity in a major Region of today's go-ahead energy industry, please telephone or write for an application form to: Senior Recruitment Officer, Eastern Gas, Star House, Milton Lane, Potters Bar, Herts EN6 2PD. Telephone Potters Bar 51181 ext. 602.

EASTERN GAS

Computer Operations

KING'S LYNN £4500+

Dow Chemical is one of the world's leading chemical manufacturers with an exceptional record for growth and profitability. The Computer Services Group of the U.K. Company is located at King's Lynn together with a number of other major functions.

We are looking for a computer professional to assume responsibility for our computer and data entry operations. We have an IBM System 3 model 12 for batch applications with remote job entry to a mainframe in Switzerland. The equipment is primarily operated during normal office hours. As part of our development plans for interactive applications, we will be installing a PDP-11/70 with VDU terminals at various locations in the U.K. This and other developments will provide a real career opportunity for someone with at least three years' experience of computer operations, wishing to get involved in the assessment of our long term application requirements. The successful candidate will be expected to work with the minimum of supervision in a progressive informal working environment.

Starting salary will be around £4500 but could be more for an exceptional candidate. We offer a range of fringe benefits including pension, share purchase and BUPA schemes and generous relocation expenses where applicable.

Interested? Then telephone:

Alan Popham, Personnel Manager
Dow Chemical Company Ltd.
King's Lynn, Norfolk
Telephone 01223 101 for an application form

DOW

Eurologic Consultancy

SALES EXECUTIVES

London Based

Are you a London based salesperson who can take charge of the Sales and Marketing for our RPG II division?

Due to our current and continuing expansion we require a top-level sales executive who can maintain our growing level of activity.

It is our intention that as the need for additional sales effort becomes necessary that you will assume the responsibility for control of the total RPG II sales and marketing effort.

Midlands Based

Are you a Midlands based salesperson who would like to run your own business?

Eurologic already has an established customer base in the Midlands area. We require a highly motivated person to take charge of this area and turn it into a large viable self contained operation.

You will be responsible for the sales and administration of a growing number of programmers and analysts developing commercial systems for our existing and new clients.

A knowledge of IBM GSD or equivalent computer systems is desirable for both positions.

QUOTA EARNINGS IN EXCESS OF £10,000 p.a.

Eurologic Software, since its formation by the Wellorax Group, has expanded rapidly to become one of the country's leading specialist small system software houses.

If you think you have the qualifications and are prepared to accept the challenge and responsibility of one of the above positions contact me, Terry Wright, on 01-549-8933 during the day or 01-894-5418 evenings or weekend.
